Providing
Excellence:
Our Röders

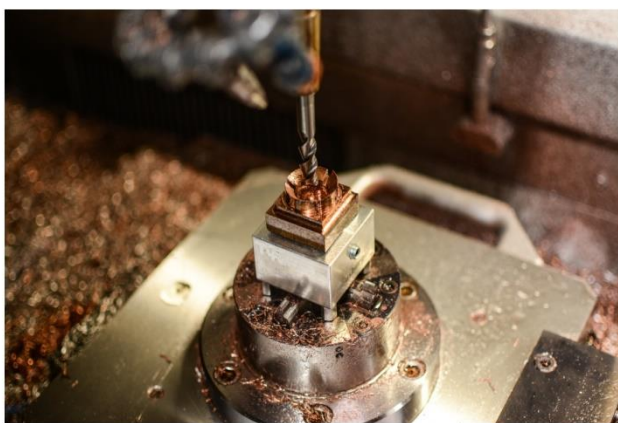

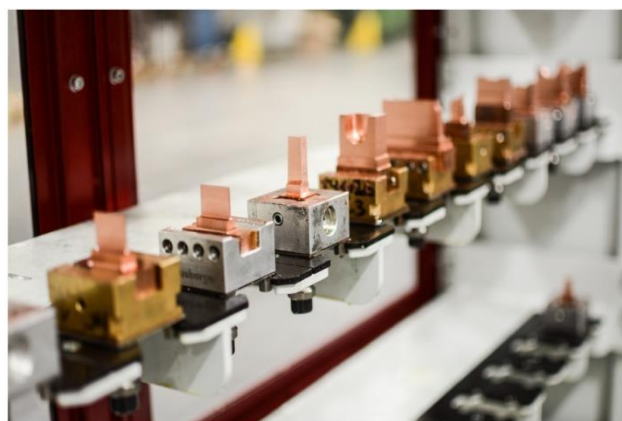

Providing Excellence

As a company dedicated to providing excellent customer service and high quality products, we are always looking at areas of improvement.

One particular area we are able to do this in, is with our machinery. We are constantly on the lookout for new technology and better, more efficient ways of manufacturing. And our machinery helps us to do this.

Many industries get really excited when they discover that we can machine their tools using these machines, particularly the medical industry.

We asked our CNC Team leader Mark why this was. "It's simple really", Mark told us, "these machines offer exceptional accuracy, speed, repeatability and performance. It's a no brainer when it comes to machining tools for our customers."

He went on to explain "The automated cells have 2 control centres with their own software, so they are able to offer much more accuracy. They are able to process information much more quickly and accurately, giving a superior and tighter finish".

Investments

In recent years, we have made huge investments in our machinery, not only to better our manufacturing, but also to help us achieve energy efficiency and sustainability.

Our toolroom has seen a significant investment with our new twin high speed automated cell, the Roeders RXP500 3 Axis Machining Center.
