

Gates, Railings & Metalwork
Automation, Access control & Entry systems

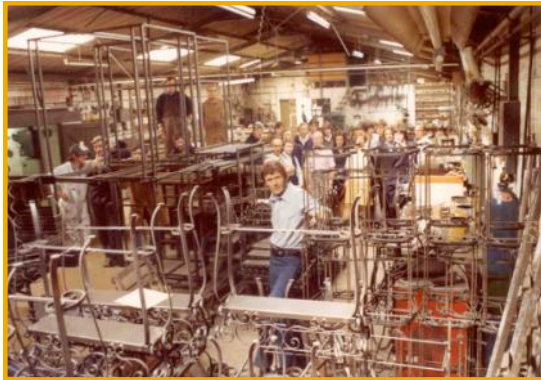

RENZLAND
POWERGATES

Renzland Powergates Ltd is based at the Renzland Forge, Copford in the heart of Essex. Our craftsmen have been making handmade, traditional and artistic metalwork for over 50 years.

Our Bespoke Steel Estate Gates and Railings are a very special range and a major part of our output; everybody enjoys the creation of these beautiful and artistic items. The older craftsmen and blacksmiths regard it as their duty to pass on their skills and knowledge to the new generation, thus keeping this old and very lovely craft alive.

We offer bespoke Gates, Railings, Balconies, Balustrades and Architectural Metalwork made to your drawings, specification and design, with many different finishes such as hot zinc spraying and galvanising for rust prevention, stove enamelling and powder coating for a top notch finish.

We also offer installation, gate automation, barriers, access control, service and maintenance to new and existing entrances. Our engineers and installers cover the south east of England and beyond.

Our gates have the option to be double or single swing or as a sliding gate, matching side gate and railings are also available with options for a choice of finial, house name or number, automation, post boxes and a choice of finishes.

The Lincoln

The Lincoln gate with its simple classic design and clean lines. Lighter weight steel construction make this a cost effective stylish gate.

The Carlton

The Carlton gate with an upward curved top frame with a shadow bar.
Fabricated with heavy weight steel, with a ring detail to the mid rail.

The Raydon

The Raydon has a double curve detail with end scrolls.
Heavy weight steel with simple forged finials.

The Salisbury

The Salisbury gate is a traditional scroll design.
Heavy steel construction, shown with optional extra detail.

The Hamilton

The Hamilton is a traditional design of gate with scroll detail. Fabricated using solid steel with highly detailed scrolls, this is our flagship gate.

Timber Gates

Despite primarily being a metalwork company we are also able to offer a range of bespoke timber gates, made from softwood or hardwood. Please contact us for more information on this service.

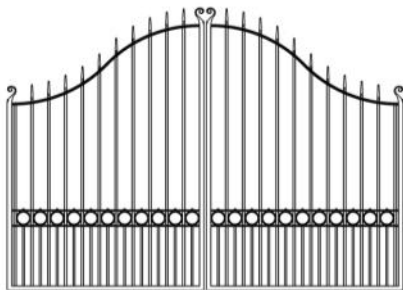

Bespoke Gates

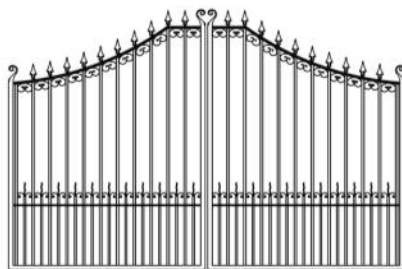

We are able to fabricate unique one-off gates.
Made to your own design and specification.

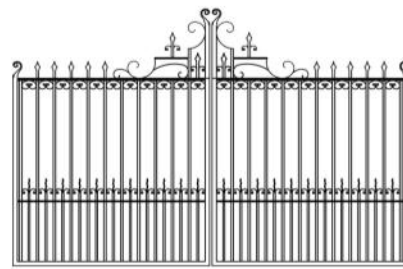

If you have your own design, please email or send us your drawings and we can provide you with a detailed quotation. We can fabricate to match existing gates, railings and metalwork, and can automation to existing gates.

Automation and Entry Systems

UNDERGROUND OPERATORS:

These are fitted into the ground beneath the gates. (Pictured to the left)
The biggest advantage of the underground system is that it only has the lid showing at ground level and the operator is contained within a foundation box. It is therefore very unobtrusive.

ARM ACTUATORS

This system is where arms, or rams, are fitted to the inside of the gates.
Excellent value for money, but slightly more obtrusive.

SLIDING GATES

There are two types of sliding gate, either a tracked gate with a steel track buried in the ground across the opening for the gate to slide on, or a cantilever style gate where a concrete base is installed to one side of the opening. Support posts and wheels are fitted to the base for the gate to slide on: this means that there is nothing across the opening when the gate is open. This is suitable for uneven or sloping drives. Both of these systems use a geared motor operator to move the gate.

VIDEO ENTRY SYSTEM

There are a variety of video systems to choose from with a call panel mounted by the gate entrance. Inside the property a handset with a video screen is fitted. Multiple handsets and or screens can be fitted throughout the property. When the panel call button is pressed the handset/screen will ring, and you will be able to see and talk to the visitor and let them in at the push of a button.

AUDIO ENTRY SYSTEMS

As above but without the ability to see who is calling.

GSM ENTRY SYSTEM

The GSM intercom uses the mobile phone network, and the entry panel mounted by the gates has a sim card inside. When the call button is pressed it makes a call to your home or mobile phone (you can be anywhere in the world) allowing you to speak to the caller and let them in if required.

RADIO REMOTE CONTROL ENTRY

Our gate systems come with a couple of radio remote control handsets, allowing you to open the gate from inside your car etc. Extra remotes can be purchased and programmed for friends and family.

DIGITAL KEYPAD

This is a coded panel that is installed by the gates (or incorporated into an intercom system); a code is entered and the gates will open. Handy for visitors or deliveries (the code can be changed with ease).

SURVEY, INSTALLATION & SAFETY

We are able to offer free no-obligation site surveys, so we can advise which product best suits your requirements. Whilst on site we can accurately measure for gates and railings. We offer a full installation service using the latest high quality safety tested equipment. We are also able to offer risk assessments, as well as service maintenance contracts to make sure everything is kept in safe working order.

For detailed material specification on any of our products please contact our main office. Please feel free to visit our showroom. You can also visit our workshop to see your gate being crafted.
