

Best Green or Sustainable Design

Company: Liquid Interiors
Project: Vivid Eco Well Show Flat
Client: Henning Voss
Location: Hong Kong
Design team: Rowena Gonzales, Leo Leung, Lyan Chow and Eric Lam

The Vivid Living Healthy Living Eco Show Flat was designed to offer a healthy living option for single residents to young families that want an environmentally responsible city living option, evolved to optimise well-being and facilitate the healthiest lifestyle possible.

The sustainable elements of the flat were designed based on LEED criteria. Some highlights include real-time energy management and performance built into the home automation system. This adaptive system uses light, humidity and motion sensors to seamlessly control sun shades, lighting and a/c temperature and relays back energy calculations for real time energy monitoring.

Green materials used include reclaimed wood to clad the ceiling beams, FSC engineered wood floors, recycled tiles for the bathroom, low VOC self leveling flooring for the corridor entrance and low VOC ceramic paint for the walls which are highly washable. All lighting sources are LED, and all appliances selected for high water and energy efficiency.
