SO EASY RADIO
CORE
STUDIO PACKAGE

The CORE package contains the essential items which form the heart of the radio studio – a broadcast mixer, a suite of integrated software tools and an intelligent interface which allows the mixer to communicate with the PC running the software.

CORE is aimed at broadcasters who already have mics, CD players and speakers etc, but are looking to upgrade their essential equipment.

The S-Radio software contains tools associated with each of the tasks required to produce and broadcast programs, both in Live Assist and Automated modes.

Either an all-in-one touch PC or rack-mounting industrial PC can be supplied with the package, or an existing customer's PC can be used.
