

STRAWBERRY HILL VINEYARD LTD

Strawberry Hill Vineyard is an award winning Vineyard situated in the rolling countryside of Gloucestershire

Strawberry Hill Vineyard has already produced a variety of award winning wines, and our devotion to the ongoing improvement of English wine is continuous. Our business aims to produce distinctive and inviting blends of wines produced from the finest fruit.

The quality and finesse of these wines make you want to enjoy them time and again.

• THE VINEYARD •

The successful growing and ripening of grapevine varieties in England and the successful establishment of commercial vineyards has developed considerably in recent years.

Here at Strawberry Hill Vineyard we have done much to successfully pioneer the growing of vines under glass and in doing so we have created our own micro climate that is protected from the irregularities that many other vineyards experience.

What makes us competitive in today's market is that we can successfully produce and ripen varieties of grape in ways other vineyards cannot. We have found that growing vines under glass has many advantages, namely that our growing conditions are less affected by the UK's inconsistent (rainy!) seasons.

The ripening season is some four to six weeks longer, temperatures are consistently higher and this has substantially reduced the risk of frost damage in early spring, at time of bud burst.

• OUR ACHIEVEMENTS •

To date we have produced over 15 award winning wines awarded by; The UK Vineyard's association, The International Wine Competition and Decanter World Wine Awards. Our aim is to continue to win many more. We hope to continue this success through implementation of improved working methods, expansion of vineyard blocks and a Kaizen management system of continual improvement.

Ollie now re-joins the company, having been working on vineyards abroad in Germany, California and Tasmania for the last 2 years, and now looks to emulate certain working practises at Strawberry Hill.

• GREEN •

Strawberry Hill Vineyard strives to be as organic and natural where possible. Instead of using potentially harmful pesticides, we favour the use of natural predators to counter any potential insect issues, one of many ways of ensuring our natural sustainability.
