Stress**Tester**™

Application Performance Testing
IN DAYS NOT WEEKS

StressTester™ from Reflective Solutions is an enterprise class application performance testing tool, capable of providing comprehensive, in-depth analysis of any web application's performance, scalability and load capacity. Proven to reduce project timescales and costs whilst still allowing testers to configure complex scenarios, StressTester is a tool used by test professionals who wish to focus on the planning and results of performance tests and not be delayed by the complexity of the test tool.

StressTester is quick and simple to setup and use, even for inexperienced users. No code or script need ever be written as the whole system is accessed and configured through a highly intuitive User Interface with built in wizards and video tutorials to guide users through the testing process. This results in significantly reduced project testing timescales.

In real-time, StressTester also monitors every aspect of the system under test. This includes low level monitoring of the system's operating systems, web servers, application servers and database systems. Poor performance results are automatically correlated with system monitoring data, allowing StressTester to instantly pinpoint the underlying causes of performance issues.

By adopting StressTester, testing can be undertaken more regularly and more efficiently whilst considerably lowering the risks of incorrect testing.

> **No application tested with StressTester has ever experienced an application performance problem once released into production.**

## solutions

Stress**Tester**™

QUICK AND SIMPLE TO USE

- No scripting expertise required
- Intuitive User Interface with wizards and video tutorials
- Free Online Learning Centre
- 50% – 80% effort savings - tests can be carried out in days not weeks
- Time saved can be used for further testing

MONITOR APPLICATION RESOURCES

- All server and infrastructure resources can be monitored during performance testing
- Application performance and system monitoring data automatically correlated
- Automatic problem diagnosis enables simple resolution of issues

COST EFFECTIVE AND AFFORDABLE

- Savings of up to 95% compared to rival tools
- Fair, clear and transparent pricing
- Reduced project costs
- No restrictions on licences or load

CORRECT RESULTS AND POWERFUL ANALYSIS

- Performs and scales in line with realistic peak traffic loads
- Simple to set up and execute correct and realistic load and behaviour simulations
- Powerful and fully customisable analysis

ADDITIONAL FEATURES

On-demand cloud testing - generate load from the cloud as required

Agile - StressTester's speed of use allows testing during agile project development

"StressTester provides Tescom with a more agile approach to performance testing whereby we are able to reduce time between test design and execution. This is due to the easy installation, ease of use and rapid user journey development. This time reduction shortens the feedback loop to the project, which provides immediate business value to our clients." TESCOM

"We've found that StressTester is very easy to use. This ease of use does not though come at the price of being limited in functionality – indeed it covers all that products ten times its price provide! Before adopting StressTester we put it through rigorous comparative tests that proved that the results it supplies are the same as the industry leader." ICentrum

One of the strongest pros for StressTester™ is Reflective Solutions' unprecedented customer support" - Will Smithee, Questcon USA

"A job that would take 10 days to prepare in other tools, takes 2 or 3 days with StressTester" - Head of Testing, Mission Testing
