Professional Digital Signage Prologue

Prologue Features:

- Software signage solution
- Powerful software displays text, images, video, flash & RSS content
- Easy to use
- Add or change content at will
- Inbuilt timer function enables content to be pre-scheduled

Dynamic digital signage is eye-catching and effective, but it has, until now, been relatively expensive, mainly due to the sophisticated hardware required to run the applications.

The NEW Prologue Digital Signage System represents a breakthrough in technology and affordability. Prologue is a "software-only" solution, so it uses existing/redundant hardware. It will operate on virtually any Windows-based PC, standalone or networked.

Designing new signage content is quick, simple and intuitive. You can start with a clean page and add your own content as you go along, or for speed and simplicity select one of the pre-made templates and modify it to suit your needs. Insert your own choice of text, graphics, video, flash files and even RSS feeds for live news, weather forecasts, etc.

A scrolling text function allows live messages to be posted by authorised personnel.

The software also includes a 'timer' function,

allowing various alternative signage screens to be displayed at different times or on different days. A typical application would be, for instance, in a canteen where a breakfast menu might automatically appear between 07.00 - 09.00 and a lunchtime menu between 12.00 - 14.00, while corporate videos, product information, live news, sporting results, etc are automatically displayed at other times.

Another application is school classrooms, where timetable changes, after-school activities or other important information can automatically be displayed on classroom projectors during break-times and lunchtime.

The Prologue System is available to rent or buy. A full installation service is also available should you require screens, cabling, etc.

We offer a range of alternative Digital Signage Systems if the Prologue system doesn't suit your needs. Please don't hesitate to ask for further details.
