

## Business Intelligence

**Business Intelligence should be an integral part of every company's operational strategy.  
From video and audio conferencing all the way through to Sound Treatment Solutions.**

Business Intelligence offers the opportunity to install complete solutions for meeting rooms, open plan offices, desk management and your office infrastructure. Remark are always at the forefront of Business Technology offering new innovations and technological advances. We can provide you with the most up to date solutions all with the ability to integrate with and enhance your IT and Unified Communication systems.

Innovation and user-friendly technology solutions are now improving the way we work and learn. Communication technologies continue to move on at an incredible pace – and more and more creative solutions are being developed to keep staff, customers, stakeholders and suppliers informed. Advances in technology make almost anything possible within the sphere of business intelligence, allowing your business to collaborate with your target stakeholders creatively, efficiently and cost-effectively.

## Enhanced Spaces

With open plan offices on the rise and glass meeting rooms becoming the norm, privacy is more integral than ever. Sound Masking can be tailored specifically to your workplace to reduce both background noise and conversation distractions and also protect confidentiality and restore privacy back into the workplace.

Efficient, simple meetings create a better experience for everyone involved. With the control of room temperature, lighting levels and ventilation you have complete power over the room, giving you more productive work spaces. Room automation is scalable and can be expanded should the need for the technology, or the office space, increase.

## Advanced Communication

Remark can transform your retail space, reception area, collaboration space and operational workspace so you can stand out from the crowd. The ability to be able to use digital presentations creates a more engaging and effective method of communication and a more enhanced experience for customers.

Retail, healthcare, transport and restaurant sectors are rapidly discovering the benefits of having digital signage displays and interactive solutions on their premises, to attract and inform customers by promoting new products, services and promotions. Remark work with businesses to design and install Advanced Communication Technologies that help increase productivity and optimise your working environments.

## Collaborative Spaces

Our design team can work with your business to design collaborative technologies and solutions, helping you create an ergonomic work environment which will transform your meeting space. Our solutions connect people to their workplace through technology, whilst enhancing wellbeing and employee satisfaction.

Intelligent Room Booking systems work in harmony with video conferencing and wireless presentation so you can now create a comfortable, reliable and effortless meeting space that allows your staff and clients to work as one. The future for businesses is to be ever more agile and flexible. Our intuitive technology allows your office space to be completely perceptive.

## Integrated Technology

Every business needs a robust IT network, Remark offer a fully integrated service to suit the specific needs of your business. With our flexible approach we can undertake one-off projects or manage your day-to-day needs. You will benefit from a range of consultancy, management and support services.

Modern day business communication needs to be more flexible, providing a connection from the conventional meeting room to versatile open space areas. Remark offer industry-leading Unified Communications for businesses of all sizes. Our expertise means we can offer the best advice – from new or reconditioned office phone systems to Hosted VOIP systems.
