

Riglock Utility Couplings

The Riglock is a non-interchangeable quick release coupling which primarily focuses on ensuring utility hoses carrying different substances are not coupled together. It is designed to be used in the oil and gas sector, providing a tight seal to both fluids and gases. Its durable design allows easy use whilst being resilient to extreme working conditions. It is also fully interchangeable with the Glenlock and Enerlok range.

The extremely durable colour coding system determines the application of the coupling and conforms to industry standards.

- Coupling Style: Bayonet type with pin style locking system
- Material: Stainless steel 316
- Seal: Medium nitrile o-ring (except for HCB)
- Working Pressure: 20 bar (tested to 80 bar continuous)
- Temperature Range: -35°C to +120°C
