

Construction – Modular Bays:-

Containex modular bays supplied by PMS Ltd can be configured to meet the majority of the needs for office and welfare projects.

From relatively small office set-ups to large multi-storey facilities can be catered for.

Where larger open work spaces are needed, we can configure the bays on a back-to-back arrangement.

Areas can be partitioned off to form corridors with offices at either side or a combination of partitions to form meeting rooms, canteens, WC's and first aid rooms etc.

To further improve the working environment, AC units can be specified.

Due to the system being flat-packed, the ability to erect bays in previously in-accessible places becomes a real advantage and opens up the possibility more space.

Furthermore the system lends itself to projects that may need to be installed upon gantry platforms or indeed barges.

On sites that are tight on space, then double or triple stacked facilities can be erected to reduce the footprint, along with staircase landings and/or stair-pods.

Some benefits on using Containex from Portable and Modular Services Ltd:-

- Standard size open plan and welfare bays are available on a 2-3 week lead time for small projects
- Full design and specifications available on a 3-4 day turnaround from receipt of outline specification
- Tried and tested modular system
- Consistent quality attained due to ISO 9001 manufacturing procedures being followed during fabrication in factory
- Flexibility of system and flat-pack nature enables more options with regards to workspace and siting of such
- External colour options, including corporate livery
- Full Turn-Key installation services covering transport, crane, installation & dismantling, RAMS and foundations
- Approved Containex installer
