# What we can do.

## Your Home - Your Way

ET HomeCinema established in 1991 is made up of a small ,highly experienced, dedicated team of individuals. We take pride in striving to achieve the highest levels of performance in all aspects of the projects we undertake. With that in mind we have some of the best qualified engineers in the industry and do not sub contract any of our work. We work with our clients to design and install bespoke systems that compliment their lifestyles.

### Home Cinema

We are an award-winning home cinema installation company and pride ourselves on delivering the best in home cinema. From design to commissioning we can ensure a stunning looking and sounding cinema in your home.

Our showroom demonstrates what can be achieved boasting high quality sound and picture, full control via control4 and cinema seating provides the luxury whilst enjoying a good movie.

Our website has a range of packages to suit any budget.

### Control System

A well designed control system should allow anyone in the household to easily control everything in that particular room.

User interfaces for controlling the system can be an Ipad/Iphone /Android device, C4 Touchscreen or dedicated remote control.

Lighting scenes can be programmed to integrate with audio and video , so when watching a movie if pause is selected certain lights raise, when play is selected the lights resume to previous level. When music is selected a party lighting scene can be executed which causes the colour changing Leds to strobe for a disco effect.

The Control4 system can also be controlled from Ipad,iphone or PC when away from your property. This is especially useful for creating lighting scenes in other areas of the house to deter intruders when no-one is at home.

### Multi-room audio

As well as having surround sound system for movies , TV and sport , We can deliver audio to any room in the house.

Music selection via Control4 app on Ipad/Iphone or Control4 Touchscreen . This enables selection of over 15 million available songs at the touch of a button or easy access to your own Itunes music via a wireless bridge . Integrated with the lighting control this is ideal for parties or just relaxing and listening to your favourite album.

### Networks

A stable and reliable network is at the heart of any modern day home. The internet is becoming the primary source for visual and audio media.

The majority of equipment specified for high-end cinema rooms and smart homes relies on a IP network both for local and internet communication. We supply and install both Draytek and Ruckus equipment and we are also Cisco CCNA qualified so can specify and configure a robust reliable wired and wireless network .

# Home Cinema

We use a range of screens to suit our clients requirements including acoustically transparent , electric, curved and screens with masking for that true cinema experience.

Stylish Acoustic Panels designed and created by ET Home Cinema to enhance the sound of the room and look visually aesthetic.

Lighting Control via Control4. Giving the option for full intelligent lighting control whether for a single room or for the entire house.

We offer a range of Home Cinema seating including Signature seating and FrontRow Seats designed for optimum cinema viewing.

We are an award-winning Home Cinema company that takes great pride in their high standards and quality of service offered to our clients. With awards from Essential Install and Cedia we are pleased to be receiving accolades from the industry.

We like to invite potential clients to our showroom for a tea or coffee and a chance to show off our demonstration areas. This way you can actually try out our control systems and see them in action. Experience that Cinema feel in our dedicated cinema rooms.

The next step is to visit our clients property and get a better idea of their needs and requirements. We can offer 3D visuals to give our clients a better idea of what the installation in their home could look like.

We are not about pressured sales or selling the most expensive products, we believe in giving the right advice and creating systems right for our client. We want satisfied customers who will come keep coming back to us.

Control4 has been our chosen control system for years now and we were quick to see its potential. In that time it has grown to one of the most popular and reliable control systems available. This system can control everything from you TV, music, movies, lights, heating, security system and even you power consumption can be monitored.

Control4 offers the ultimate home automation solution by making the electronic components and systems you already use on a daily basis work together, seamlessly. By Integrating everything from lighting, music, video, climate control, security even smartphones and tablets.

Control4 creates personalized experiences that enhance your life and work with added comfort, savings, convenience and peace of mind.

### Complete Home Control

With Control4, you can start with one room and add more automation capability whenever you want. Here are just a few ideas how Control4 automation can turn your house into a smart home:

-A half hour before you wake up in the morning, the thermostat adjusts to heat up the house, the lights slowly become brighter and the shades gradually open.

-As you leave for work, one push of a button locks the doors, arms the security system, turns off all the lights, powers down all non-essential devices and adjusts the temperature settings to the "Away" mode.

-While you are at work, your Control4 system sends you a text message if your child has not returned home from school by the expected time, if the gaming system has been in use for more than an hour or if there is a water leak detected in the laundry room.

-When you return home in the evening, the push of a button opens your garage door, unlocks the entry door and adjusts the thermostat to your preferred temperature.

-When you are ready to watch a movie, instead of using several remotes, a single interface be it a touch screen, smartphone, tablet or simple remote provides you with easy control of your entire entertainment system. As the movie starts, the blinds close, the lights dim and the temperature adjusts to keep your family comfortable.

-When it's time for bed, the press of a "Goodnight" button closes the blinds, turns off the lights, locks the doors, arms the security system and turns off all televisions and game consoles.

# Control Your Home

# Multi-Room Audio

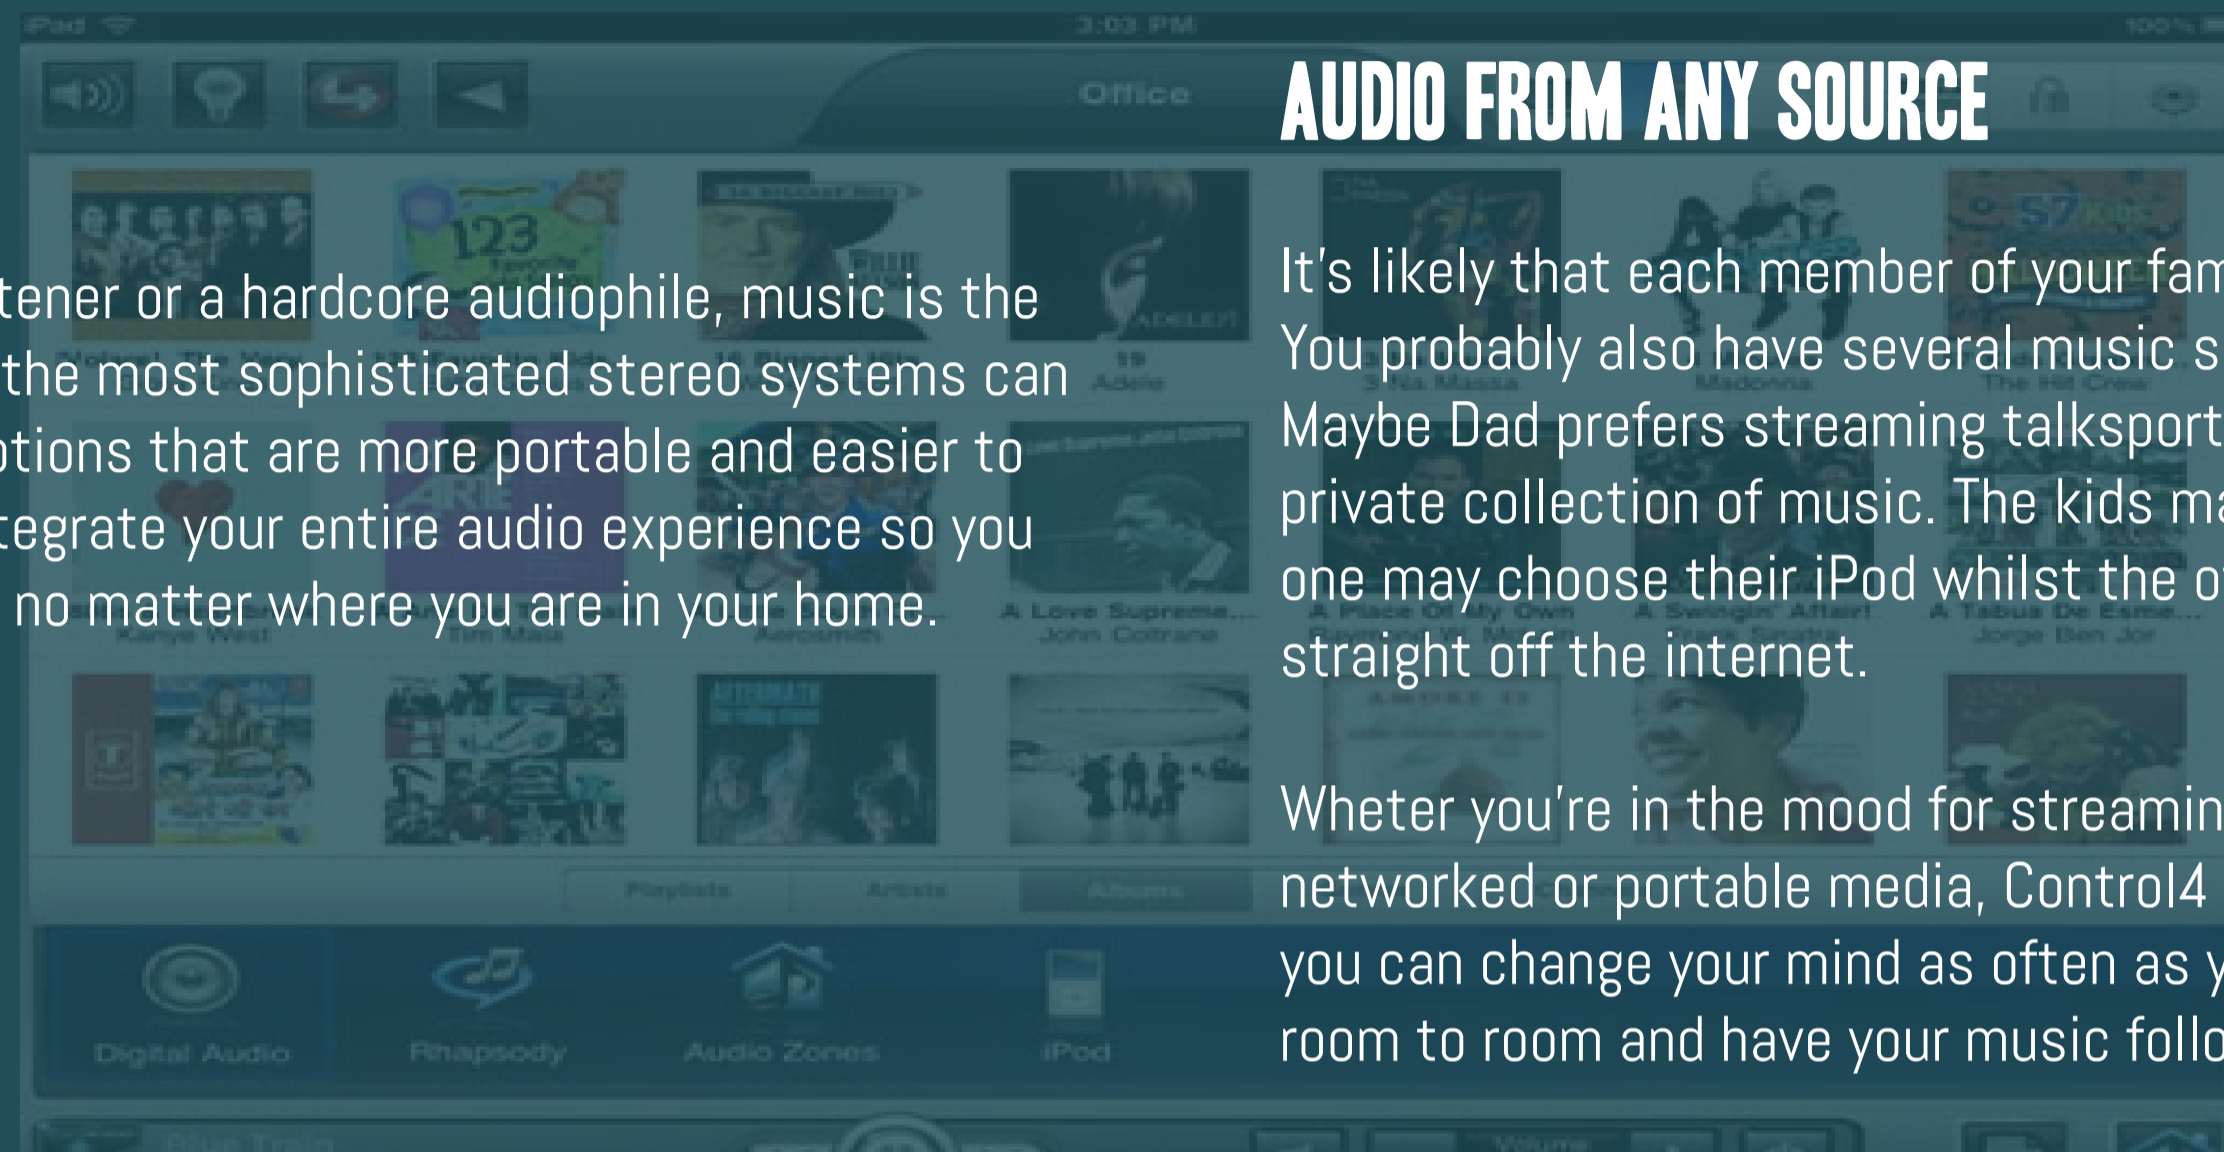

## LISTEN

Whether you're a casual radio listener or a hardcore audiophile, music is the soundtrack of your life. But even the most sophisticated stereo systems can get neglected in favor of other options that are more portable and easier to use. The goal of Control4 is to integrate your entire audio experience so you can listen to whatever you want, no matter where you are in your home.

## AUDIO FROM ANY SOURCE

It's likely that each member of your family has different musical tastes. You probably also have several music sources that each of you prefers. Maybe Dad prefers streaming talksport radio, Mum likes to choose from her private collection of music. The kids may want to listen to pop songs and one may choose their iPod whilst the other downloads the latest tracks straight off the internet.

Whether you're in the mood for streaming audio or something from networked or portable media, Control4 can handle it all. The best part is you can change your mind as often as you like. you can even move from room to room and have your music follow you there.

## The Wireless Music Bridge will rock your world

The Control4 listening experience just got way more exciting and convenient! Meet the Wireless Music Bridge: a little box that delivers a world of music, sports, news, audio books and podcasts to a Control4 system.

Featuring built-in AirPlay®, Bluetooth® and DLNA connectivity, the bridge allows virtually any smartphone, tablet or other personal device to wirelessly stream your favorite music to one or every room in the house.

Whether it's music downloaded from iTunes or a favorite streaming service, such as Pandora or Spotify, the Wireless Music Bridge effortlessly connects these vast libraries of music to the Control4 system, enabling you to stream your content of choice throughout the home, but don't take our word for it. Check out what Home Theater Magazine has to say about the Wireless Music Bridge.

# Wiring and Networks

The majority of equipment specified for high-end cinema rooms and smart homes relies on a IP network both for local and internet communication. We are a Draytek network dealer and Cisco CCNA qualified so can specify and configure a robust reliable wired and wireless network .

Remote monitoring can be configured so if you require minor tweaks to the system , or power reset (such as Sky HD Box) we can do this from our offices. A fixed IP address would be required or an alternative DynDNS service which we can organize if required.

**PLANNING YOUR HOME**

### Planning your home

Any system will require planning before an installation ever begins. Whilst design changes can happen on-site during a project, these should always be based on an initial design. Multiple changes on-site due to lack of planning only serve to slow the installation process and add cost to the project. With only basic floorplans it is possible to plan which services you need prior the design or installation stage.

### Sample house plan

The example below shows communications, entertainment and multi-room audio locations.

Service description	Symbol
<b>Satellite, radio, digital and cable TV</b> (Add where ever you want a entertainment outlet)	(EXT)
<b>Broadband and wireless internet</b> (Add where ever you want a home network outlet)	(CON)
<b>Telephone</b> (Add where ever you want a communications outlet)	(F)
<b>Multi-room audio</b> - speaker - control keypad	(SP) (AC)
<b>Scene setting lighting and blind control</b>	If you require Lighting or Blind Control, Home Automation, CCTV or Security then you should contact a CEDIA member. They will design and install your system to your requirement.
<b>Home automation</b>	
<b>CCTV and security</b>	

Home Technology. Professionally installed

**GRADE 1 SYSTEM**

Telephone (Cat5e) Data (Cat6) TV / FM / SAT (RF 100) SAT (MF 100)

Grade 1 cabling can be terminated in a single device patch combining TV, Sat, FM, Telephone and Data modules. Mains power should be located by each socket.

Consideration must be given to the location of satellite TV cables to ensure the dish location can point toward the relevant satellite.

All in room cabling should be star wired back to the Extra Low Voltage Head End (ELYHE). All incoming service cables should be installed from point of origin (road, street) to the ELYHE.

Ensure there is a suitable mains power supply adjacent to any ELYHE equipment and outlets in remote rooms.

Incoming Telephone & Broadband

Incoming cable (BT) for CATV

Home Technology. Professionally installed

We hold the EST2 CEDIA qualification and are also a CEDIA Structured Cabling Assessor giving re-assurance to our clients that the wiring installed is both safe and future proof. Wiring for a system is the building blocks of the whole installation, improper cable infrastructure can result in major renovation work at a later date.

We realise how important the internet and networks have become with home cinema and control systems. With movies, music and television all becoming more prominent on the internet we understand that this has to work with the system and be fast and reliable.

To ensure the best possible network and internet we have undertaken a number of network courses and are now cisco qualified. We do not sub contract any network work out giving our clients piece of mind that we can fix any problems that may arise without additional cost.
