METAL PRESSINGS & STEEL FABRICATIONS

Press & Fab is a long established company whose dedicated workforce has a vast experience of fabrication in carbon and stainless steels in both plate and sections. We are especially good at the out of the ordinary requirements such as circular, conical and square to rounds and other such shapes in both light and heavy plate. We are a versatile company and can offer a small one-off fabrication, through to several large ones. From simple structural fabrications to complex mechanism and mechanical fabrications. We have our own dedicated erection team who are available to travel anywhere in the UK.

The company has 2 workshops serviced with 2 x 5 tonne cranes in each bay and our equipment allows us to be self supporting for structural components to the construction industry. We have 2 band saws capable of cutting up 650mm wide sections, 3 metre x 12mm guillotine, 2 workmates, radial arm drilling, brake pressing, rolling and several MIG sets. We have a fleet of 4 large vans/pickups. Work staff includes in-house draughtsmen, 2 contract managers, shop foreman/inspector and purchasing and administration staff.

“We offer design, detail, installation and erection where our team will work with your engineers so that you get what you want, when and where you want it.”

CONVEYOR BELT SALES & VULCANISING SERVICES

Conveyor Drums Made to order

Flexco Products

Press & Fab are sole distributor in the North East for the full range of Flexco Conveyor Belt Products.

Bolt Solid Plate Fasteners

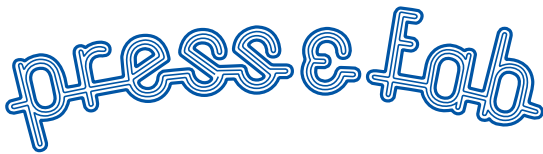

Bolt Solid Plate Fasteners are engineered to meet the demands of the toughest material handling applications; providing a strong silt-free splice and superior holding ability. A choice of sizes accommodates belts from 3/16" (5mm) to over 15/16" (24mm) thick.

Rivet Hinged Fasteners

Rivet Hinged Fasteners feature a low profile that significantly reduces the fastener's exposure to cleaner blades, skirt rubber, and return idlers. Reduced wear and tear on the fastener extends the life of the splice to maximize belt availability and to help keep productivity on a roll.

Conveyor Belt

We offer the UK’s widest range of DIN and ISO standard conveyor belts, with same day despatch for next day delivery service available. You can count on us to help select the right belt for your application.

Wear Resistant Belt

- Large stocks of various widths, strengths and cover specifications
- Extensive range from heavy duty primary to light applications
- High impact and cut resistance
- Excellent wear resistant properties
- Good troughability
- Low stretch EP fabric
- Manufactured to DIN 22102 grade Y

Chevron Belt

- Increased maximum angle of inclination
- Various patterns and cleat heights available
- High impact and cut resistance
- Excellent wear resistant properties
- Low stretch EP fabric
- Manufactured to DIN 22102 grade Y

Ripstop

- Superior resistance to rips, cuts and tears
- Helps prevent longitudinal belt slices
- Belt reinforced with impregnated steel wires
- Can be vulcanised
- Suitable for heavy duty crusher and demolition applications
- Low stretch EP fabric
- Manufactured to DIN 22102 grade Y

Toughflex

- Extremely high impact and puncture resistant covers
- Belt reinforced with patented cross-weave
- Excellent troughability
- Lightweight
- Suitable for the toughest heavy-duty crusher and demolition applications
- Can be vulcanised

Green Belting

Press & Fab are sole distributor in the North East for the full range of Interbelt P.V.C. conveyor belts. Sidewall and cleat belts for steep inclines, guide and edge profiles for positive tracking plus a range of chevron belts customised to your requirements. All of these are manufactured in-house with the most modern fabrication machinery available.
