Stock Code Restructure
helping you to get more from
your Sage solution

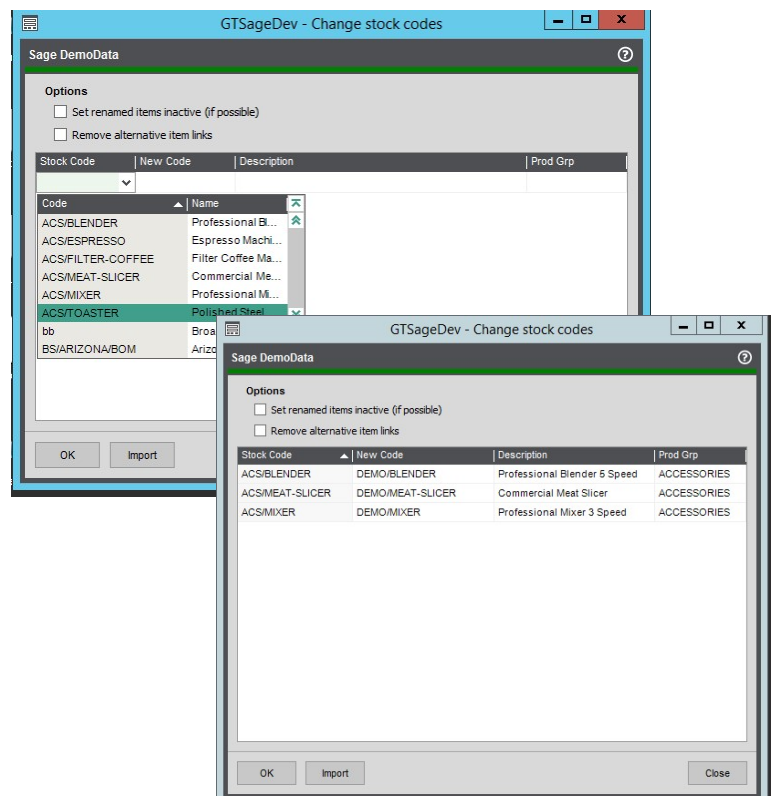

Sage 200

Stock Code Restructure from K3 is a great addition to Sage 200 allowing you to customise your existing stock code.

It gives you the facility to free up an existing stock code not set up the way you want and start again with the code you need - a feature not possible in standard Sage.

Business benefits

- Easy to use with minimal training needed
- Customise your stock codes based on your preferences.
- Ability to change the logic and structure of stock codes
- Provides users with the ease of amending existing stock codes
- Stock codes can be added manually or imported from CSV

Whether it's a relatively small step forward, or an ambitious change of direction, we'll be the partner to deliver systems which meet your exact needs.

Specialising in ERP, CRM, BI and Managed Service solutions we have offices in England, Wales, Ireland and worldwide helping over 800 customers reach their goals.

Change the logic and structure of stock codes

Say goodbye to...

- Lack of visibility of previous orders
- Time wasted on manual order entry

Amend Existing Codes

Each stock has a unique code and name. You can change an existing stock code to suit the way you operate. When the change is modified, all references to the stock throughout the system are updated. With the change, you can free up an existing code and start again with that code. For example, to be able to set up a stock as traceable.

You can filter the fields that are displayed so the description and product group columns can be populated.

Ease of Adding Items

Stock items and new code can be imported from a simple CSV file.

Item codes can also be added by a drop down arrow or selecting from a list. The system can populate the 'Description' and 'Product Group' allowing a new code to be created.
