

Telemetry Systems and Alarms

Telemetry allows you to remotely monitor your pump system. Furthermore it facilitates immediate notification of alarms via email or text.

We can install a telemetry system to cover almost any electrically operated device. When you are relying on these devices being operational, immediate notification of a failure or alert condition can be a life saver.

Call now on 01380 734900 and we would be delighted to discuss your application and show how we can help.

Example Applications

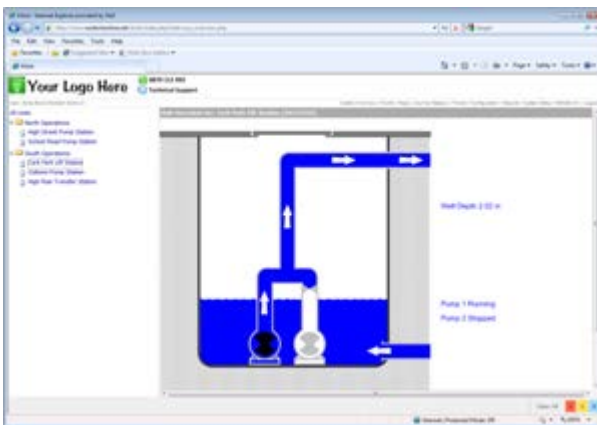

Item	Example Alert Parameter
UV System	Bulb Failed
Borehole Pump	Tripped
Water Storage Tank	High Level / Low Level
Booster Set	Tripped
Sewage Pump Station	Tripped / High Level
Sewage Treatment Plant	Blower Low Pressure / High Level

On board GPRS communications and battery backup ensure you are kept notified of equipment status.

On many applications a simple beacon or audible alarm is sufficient. Of course we offer those too.

More advanced telemetry solutions allow you to log into a portal on any internet enabled device and view a mimic of the equipment. A log of events is stored.

Carter Pumps can also help with . . .

Electrical works. We are an NICEIC approved electrical contractor.
