PRECAST BULLETIN

ARMCON

For Bespoke Moulds Or Small Production Runs

Two part polyurethane systems allow you to create bespoke and individual concrete pieces for small production runs or one off moulds for restoration work.

Once mixed they will have a consistency of water but will set to a durable rubber like material when poured over the master.

Once cured the mould can be removed ready for use.

TECH TIP

Spray your master with release oil to allow for easy removal of the cured mould.
