

Managed Technology Solutions /

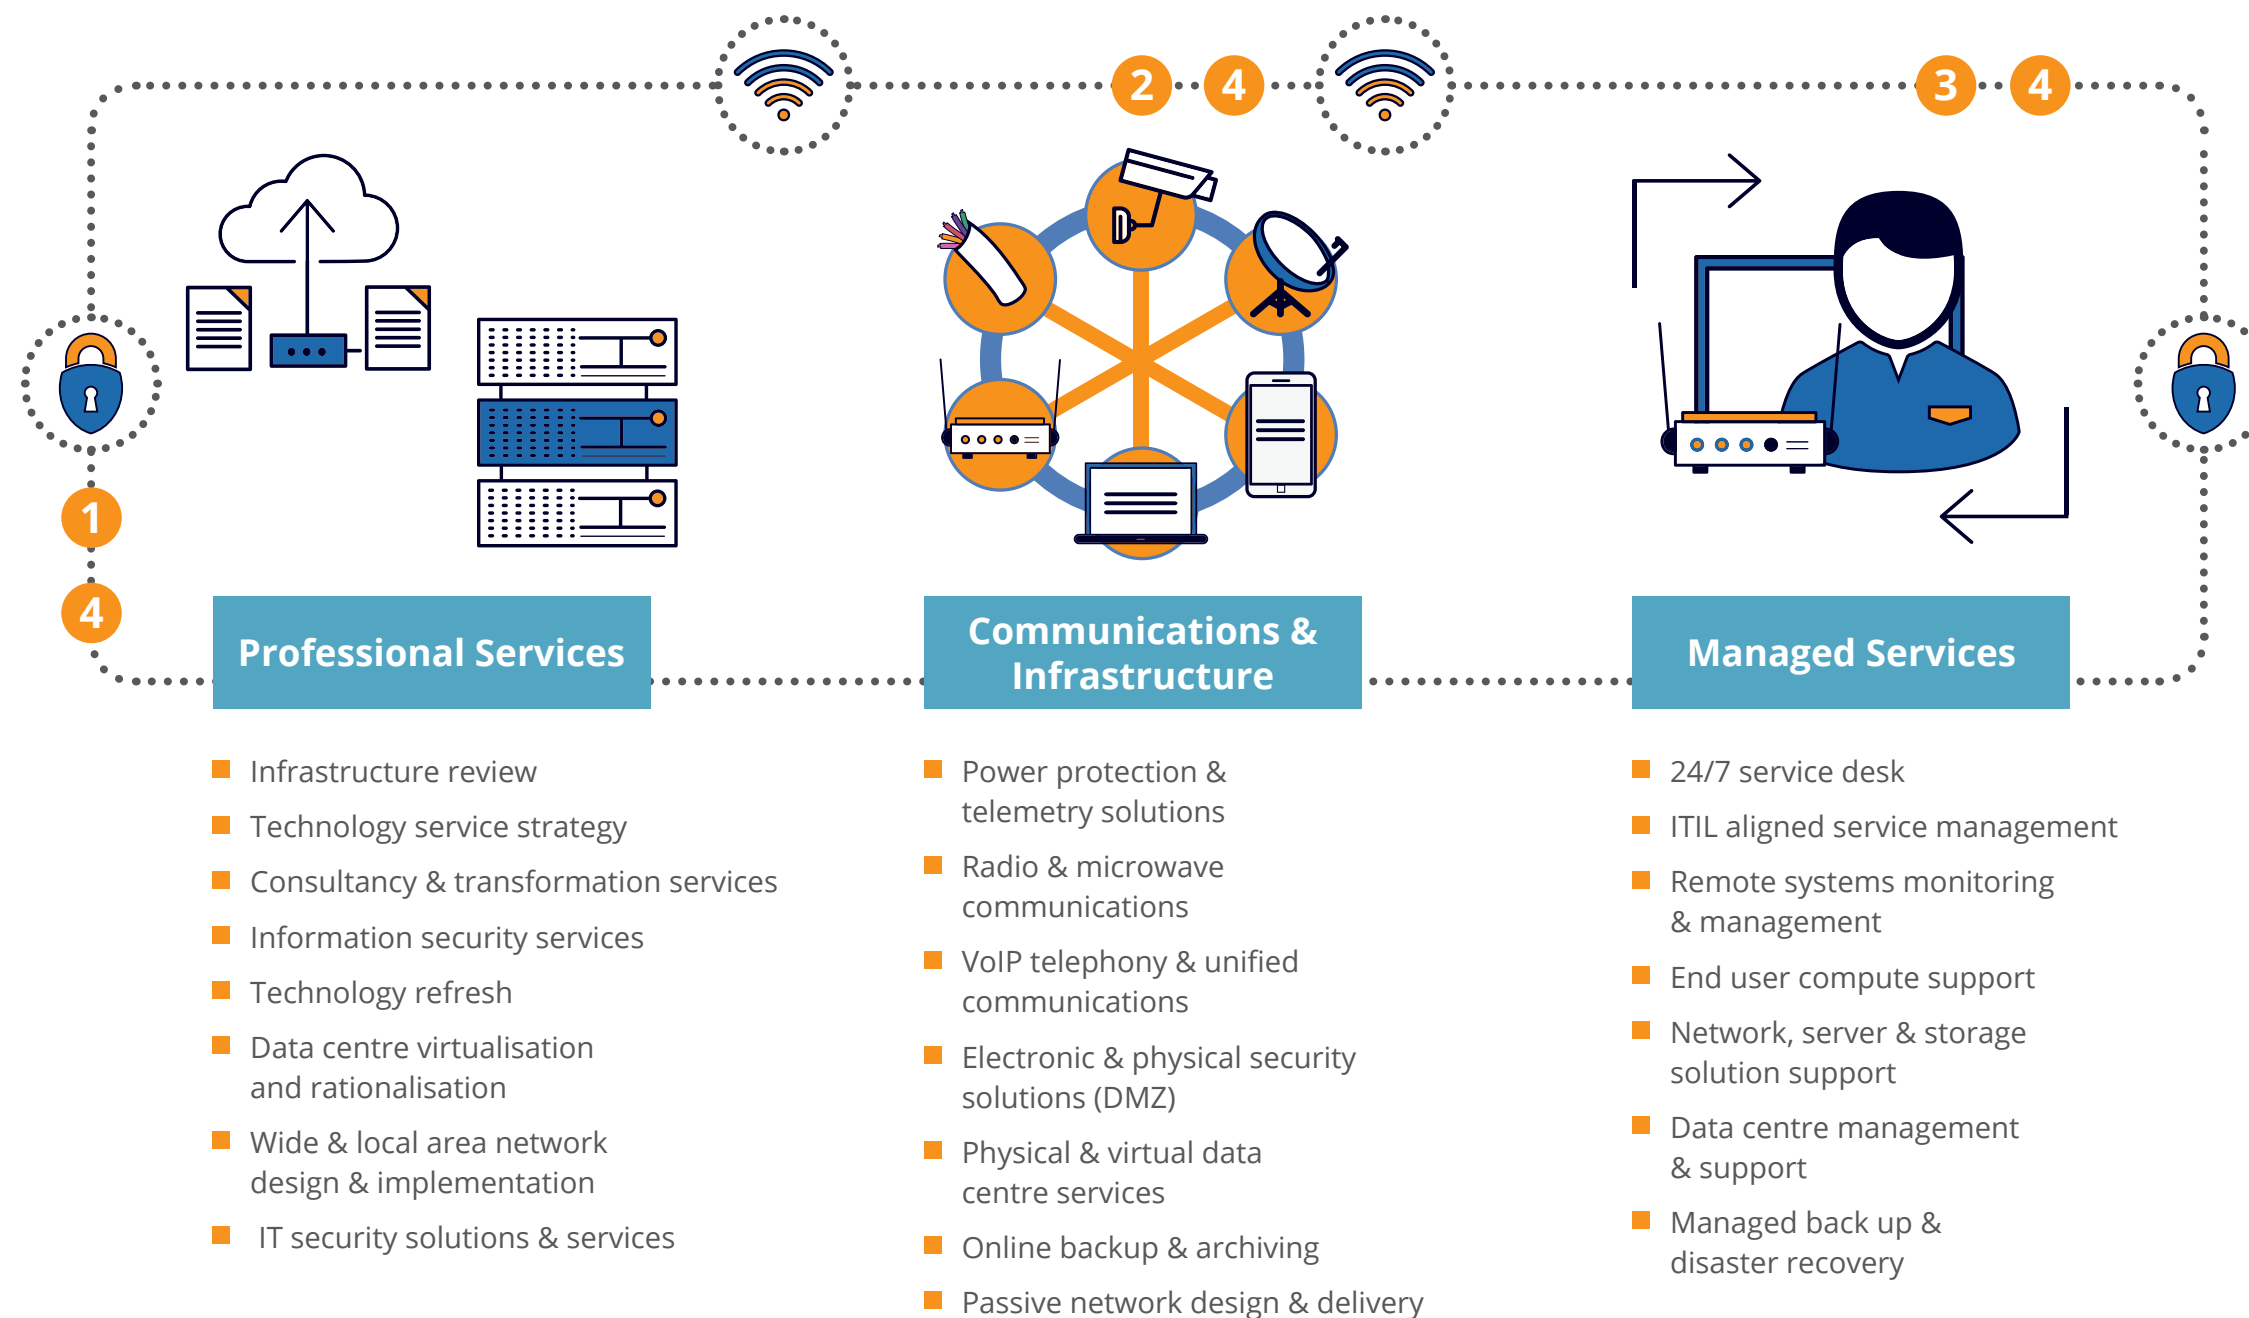

Supporting Digital Transformation,
Business Effectiveness and Cyber Security.

Vysiion / Managed Technology Solutions

The best companies and well-run projects all normally have a number of things in common – good leadership, a positive culture with supportive information flow, and, of importance, technology that works. Whether infrastructure or a product solution is required it is important to select a partner that understands these dynamics.

At Vysiion our goal is to increase client effectiveness. Using a combination of Communications, Technology and Outsourcing expertise the Vysiion team is able to design, implement and support a wide range of IT, Communications and Power Control solutions and deliver a comprehensive end-to-end service to the public, private, enterprise, international and UK utilities sectors.

1 Secure Environments /

Security is the most critical and often most undervalued aspect of most work-related environments. This ranges from physical and environmental security right through to network, infrastructure and data security. Vysiion solutions are all developed with security at its core utilising current technologies to provide protection for your people, your data, your network or most importantly your customers.

2 Connectivity /

Secure and robust connectivity is key to an effective installation. Vysiion has an established record of supporting wide and local area communication connectivity via fibre, WiFi, and microwave technology, in the mission-critical Utility Sector (e.g. on-shore and off-shore Wind Farms), secure Data Centre (as a Crown Hosting supplier via G-Cloud), and in a number of Public and Private sector organisations.

3 Managed Service /

Technology is core to an organisation's ability to deliver, both internally and externally. Currently managing over 1000 servers and 6000 end users Vysiion offer everything from in-depth roadmapping and strategic IT services, right through to exceptional IT support (via an ITIL aligned Service Desk). From consultancy to support Vysiion provides flexible solutions tailored to meet your individual needs.

4 Technology Partnerships /

Vysiion's accredited expertise, combined with selected partners' technical solutions ensure that we deliver the right technology for your business or project. Working with core suppliers for communications, security, telephony, data management, connectivity, hardware, virtualisation, and a host of other solutions means that we can always deliver an effective and robust installation.

Delivering Managed Technology Solutions

Vysiion /

With a history stretching back to 1971 Vysiion's solutions have been developed from its heritage in business critical infrastructure delivery, its ICT managed services expertise, and its Public Sector cloud, hosting and network capabilities. As a result the Vysiion team has the experience and capability to provide a full technology consultancy and delivery solution.

The aim is to help organisations meet their technology requirements by gaining new efficiencies from proven technologies.
