

Label Material 7983

Sheet Polyester Label Material

Product Data Sheet

Updated : May 2000 Supersedes : August 1999

Physical Properties
Not for specification purposes
(Calipers are nominal values)

| Facestock | 84 micron (3.3 thou) Matte Silver Polyester |
|------------|---|
| Adhesive | 20 micron (0.8 thou) #300 Acrylic |
| Liner | 170 micron (6.7 thou), 147 g/m² (90#) Polycoated Kraft |
| Shelf Life | 24 months from date of manufacture of product when |
| | properly stored between 22°C and 50% relative humidity. |

Features:

- Matte coating is compatible with screen printing and resists degradation from scuffing, chemicals, moisture, and wide temperature fluctuations. Variable information can be added by the end user, as the material is dot matrix printable and hand writeable.
- #300 adhesive bonds well to a variety of substrates including metals, high surface energy (HSE) plastics, and low surface energy (LSE) plastics. It is ideal for applications requiring high initial adhesion to LSE plastic surfaces.
- 147 g/m² lay-flat polycoated kraft liner provides easy sheet processing.
- 3M[™] Label Material 7983 is UL recognised (File MH11410) and CSA accepted (File 99316). See the UL and CSA listings for details

Application Ideas:

- Barcode labels and rating plates.
- · Property identification and asset labelling.
- Warning, instruction, and service labels for durable goods.
- · Nameplates for durable goods.

Sheet Polvester Label Material

Processing

Printing:

Material has a topcoating which is receptive to many inks including UV and conventional ink systems. The converter should verify that their ink systems are compatible with the topcoating on the polyester film by testing beforehand.

The topcoating is also receptive to other forms of printing including hot stamping and dot matrix printing. The converter should verify that the method of printing is compatible with the topcoating by testing beforehand.

The following dot matrix ribbons are recommended for use with this material.

- CGL-79™ from Mid City Columbia, 800-462-2336 or 800-996-4656
- Ranger 288 from Herbert Dehinton & Co., 847-998-8150

3M does not recommend the Ranger 288 ribbon for bar code printing.

Die Cutting:

Die cut with steel rule or flatbed dies. The 90# lay-flat liner also allows kiss cutting and back splitting. The converter can cut through the polyester facestock without cutting through the liner. Sheet label materials are not recommended for rotary die cutting and stripping operations.

Packaging:

Finished labels should be stored in plastic bags.

Special Considerations

For maximum bond strength, the surface should be clean and dry. Typical cleaning solvents are heptane and isopropyl alcohol.

NOTE: When using solvents, read and follow the manufacturer's precautions and directions for use.

For best bonding conditions, application surface should be at room temperature or higher. Low temperature surfaces, below 10°C can cause the adhesive to become so firm that it will not develop maximum contact with the substrate. Higher initial bonds can be achieved through increased rubdown pressure.

Values presented have been determined by standard test methods and are average values not to be used for specification purposes. Our recommendations on the use of our products are based on tests believed to be reliable but we would ask that you conduct your own tests to determine their suitability for your applications.

This is because 3M cannot accept any responsibility or liability direct or consequential for loss or damage caused as a result of our recommendations.
