

AQUATRACK Lite

A miniature GPS asset tracker using 2G cell networks.

**AQUA
POWER**
Technologies

Highlights

- Uses 2G networks.
- Up to 22 tracking satellites.
- 48 hour battery life.
- Selectable update frequency.
- Two RGB status LED's.
- 3 meter GPS position accuracy.
- 95 grams in weight.
- Rechargeable via micro USB port.
- Compatible with AQUASTAT IoT.

Overview

AQUATRACK Lite is a GPS tracking device, which uses 2G cell networks to communicate its position to the AQUASTAT IoT web platform. As long as there is a GPS fix and a network signal, AQUATRACK Lite can track assets to within 3 meters accuracy. The user-selectable location update time period ranges from 1 minute to 1 day, with a number of other time periods in between.

In conjunction with AQUASTAT IoT, AQUATRACK Lite can provide real time status updates of assets and notifications when the asset being tracked has entered or left geofences predefined within AQUASTAT IoT. In addition, historical logged data of the assets route can be exported as csv files from AQUASTAT IoT for further analysis.

AQUATRACK Lite is a low cost solution to tracking assets and provides operators with the potential to act immediately in the event of undesirable asset movements.

Technical Specification

Mass In Air: 95g
Dimensions: 59mm x 66mm x 25mm

Additional Requirements

- Subscription to AQUASTAT IoT.
- 2G sim card contract.
