

CIMATRICE **BMW**

TRIMMING MACHINE FOR VINEYARDS

- 5 hydraulic movements:**
- right crosswise
 - left crosswise
 - raise
 - right tilting
 - left tilting

BMW trimming machines come in various models to suit all kinds of requirements and type of systems.

All the models in our range are applied to the front part of the tractor.

The power required is supplied by the hydraulic outlets of the tractor or, upon request, a separate hydraulic control unit can be provided.

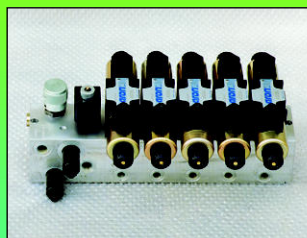

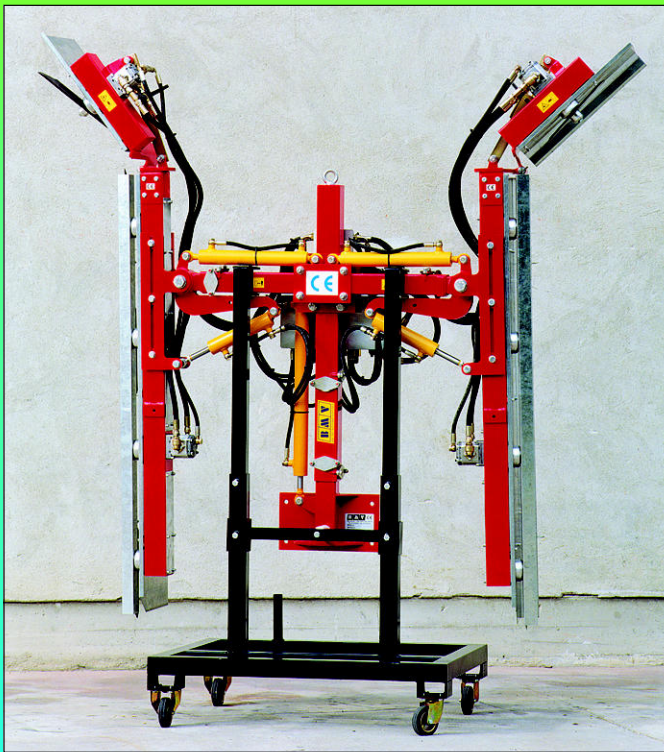

Hardened steel blades ensure top quality trimming with high cutting speeds (2000-3000 rev/min) even when the tractor moves along fast.

The special drive belt used does not require a belt tensioner.

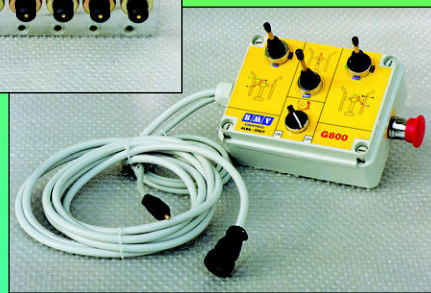

All models come complete with parking covers. Mounting and demounting is quick and easy on any kind of tractor.

TROLLEY FOR IDLE MACHINE

ELECTROHYDRAULIC DISTRIBUTOR WITH ELECTRIC CONTROLS

SEPARATE HYDRAULIC CONTROL UNIT
