Compensation: DOE

Job I.D.: OP-14-201

Foresite delivers a range of managed security, and cyber consulting & compliance solutions through strategic channel partnerships serving more than 300 customers globally.

These unique and flexible solutions offer businesses innovative ways to address the liabilities of today's complex security and compliance requirements. Our professionals, long experienced and highly knowledgeable in IT management and security, apply their expertise to providing superior product performance and unparalleled customer service through Foresite's proprietary ProVision platform.

Foresite is headquartered in Overland Park, KS & Windsor, CT, with Operation Centers in Kansas City and Farnborough, UK.

Position Summary:

Foresite is seeking enthusiastic and motivated individuals to provide Managed Security Services for our valued customers operating all over the world. This is an entry level opportunity for a rewarding career in the rapidly growing Information Security industry. This position consists of monitoring real-time event data from our customers, keeping abreast of intelligence from the IT security community and government/law-enforcement, or other industry sources and operating from 24/7/365 within our Overland Park, Kansas Security Operations Center (SOC). Shift work will be required to cover 24/7/365 operation.

Successful candidates will be able to demonstrate a foundational understanding of IP Networking, Routing & Switching, System Administration, and must possess a genuine passion for Information Security.

Responsibilities:

- Analyze security event data from customer computing platforms, network elements, and security devices
- Input customer data, perform system/network inventory, configuration management, operational ticket submission, request tracking, and problem resolution
- Frontline customer support and incident notification
- Generate and maintain operational process and training documentation
- Provide input to constantly improve our products and services to add value for our customers and shareholders
- Other duties as assigned

Qualifications:

- Relevant training in System Administration, Networking, and/or Security. Certifications preferred for the equivalent of CompTIA Security+ and Network+
- Ability to demonstrate a foundational knowledge of IP networking, Routing & Switching, System Administration, and Information Security
- Genuine passion for Information Security
- Current FW experience/certifications would be a distinct advantage

Skills:

- Professional demeanor and strong work ethic
- Strong written communication skills including the ability to develop process documentation or guidelines for technical staff
- Strong verbal communication and collaboration skills including the ability to work with both technical and non-technical customers/peers to research and resolve problems
- Aptitude for troubleshooting basic network, Windows/*nix connectivity
- Ability to apply critical thinking and logic to a wide range of intellectual and practical problems
- Ability to maintain composure under pressure and work calmly during an emergency
- Ability to manage multiple tasks and schedules

Start building your career in the fastest growing and most highly sought after IT skillset in the workforce today.
