

What happens to your waste?

The waste is collected, bulked up & transported, ready for sorting

The residual waste is then used as RDF across the UK & Europe

The process of RDF gives approx. 98% landfill diversion

Q: How is the waste sorted?

A: Both by hand & machinery

Q: What does RDF mean?

A: Refuse Derived Fuel

Compared to landfilling, the lower carbon emissions resulting from this approach to processing waste far outweigh the emissions associated with transporting the reclaimed fuel
