

# Success Story

## Fuel Usage Monitoring for Energy Reporting

**Client: Prestigious Irish Bank**

Our client is a banking group operating across the whole island of Ireland. The business prides itself on offering a comprehensive range of customer focused modern banking services. The business also engages new technologies to better run its own operations on a national level.

### The Challenge

Given this business operates many branches in towns and cities throughout the island of Ireland, the energy manager was finding it challenging to accurately collate the amount of heating oil each branch was burning on an annual basis. This information is needed and must be reported on an annual basis across the business's full property portfolio.

### The Solution

Dunraven Systems RMS Delta software gathers and stores information from deployed remote tank sensors regularly in an orderly and easy to understand manner. The system provides the users with simple history graphs along with easy-to-use data export functions.

### The Results

Utilising the solutions from Dunraven Systems, the Energy Manager is now capable of evaluating and obtaining the required data for the energy calculations with the click of a button. In addition, throughout working with Dunraven and availing of the solutions for the first time, the bank was able to set up a central national tender process for the supply of fuel, giving further savings and benefits from the project.
