WATER WATCH INSTALLATION INSTRUCTIONS (BATTERY)

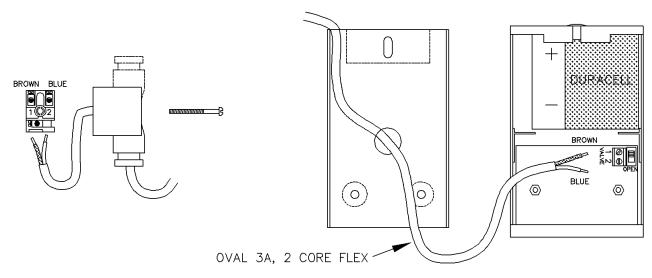

Please read these instructions carefully

Description of Operation

The valve controls the water supply to the cistern and is electrically operated by the Water Watch controller. The controller detects individuals using the urinals. A flush cycle starts with a detection followed by a delay (20min default) set by the installer and then followed by a flush. At the end of a cycle the controller waits for a further detection before the next flush cycle commences. If a period of 24 hours (or 12 hrs) elapses without detection a flush will occur.

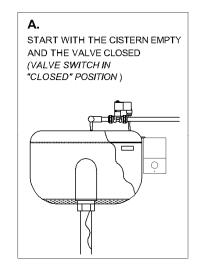

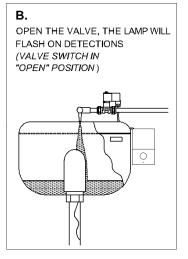

NOTE: ALTERNATIVELY FEED CABLE THROUGH TOP CABLE BLAND AND USE TRUNKING

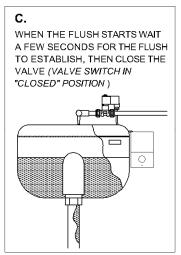

5

FOLLOW THESE THREE STEPS TO SETUP THE WATER WATCH

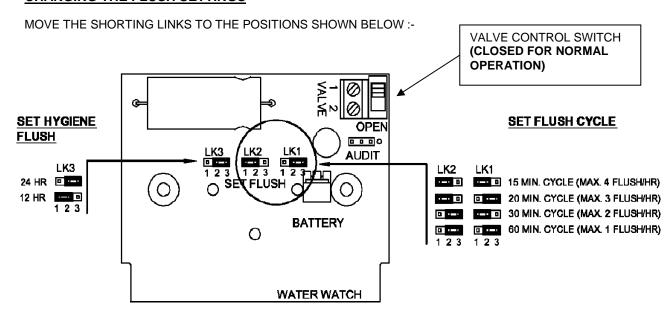

THE TIME TAKEN FOR THE CISTERN TO FILL DURING SETUP IS STORED AND USED ON ALL SUBSEQUENT AUTOMATIC FLUSHES.

THE WATER WATCH IS NOW FULLY OPERATIONAL! – CLOSE THE LID. IF THE LAMP IS FLASHING CHECK THAT THE SWITCH IS IN THE CORRECT "CLOSED" POSITION.

THE SWITCH MUST NEVER BE LEFT IN THE "OPEN" POSITION.

THE LAMP WILL FLASH ON OCCUPANCY DETECTION.

CHANGING THE FLUSH SETTINGS
