Cameo Silver & Gold Series

Fine grinding discs that deliver a constant stock removal rate. They can be used to replace many traditional grinding steps from P240 to P1200 where SiC papers are commonly used. This reduces the number of steps in your procedure resulting in considerable cost savings and waste reduction, and optimum flatness is achieved. The matrix pattern optimises the effectiveness of the MetPrep diamond suspension applied by ensuring continuous and even distribution during the grinding process.

The Jim Ashby Laboratory and Technical Centre

Established in 2018 and named in honour of our founder, the laboratory is fully equipped with ATM Metallurgical Preparation Equipment, ZEISS Microscope and Imaging Equipment, Qness Hardness testers and SciAps PMI Analysers.

We welcome all customers to visit and see what we have to offer.

Service – The growth of MetPrep in recent years and the blossoming of ATM equipment in industries throughout the UK has meant a greater requirement for routine maintenance and service. Statistics reveal that regular maintenance will extend working life and it is clearly better to preserve optimum operating performance rather than waiting for a breakdown with the resultant loss of productivity. MetPrep offer tailored service solutions for all equipment purchased from us.

For more information about Servicing please go to:

Warehouse/Delivery – The move in 2017 to larger premises allowed us to enhance our UK warehouse and storage facilities for both Consumables and Capital Equipment.

We continue to supply most consumable products on a Next Day delivery around the UK, for orders placed before 2.00pm, for a fixed one-off price.

For more information about On-line orders please go to:

Road shows – MetPrep visits several locations around the UK during the year to showcase our products for those unable to visit the Jim Ashby Laboratory & Training Centre in Coventry.
