

REACH Policy

REACH (Registration, Evaluation, Authorisation and restriction of Chemicals) is the current system for controlling chemicals in Europe. From 1st December 2008 chemicals that are manufactured or imported into the EU have to be registered with the European Chemical Agency (ECHA) in Helsinki. As we do not make or import chemicals, REACH will have minimal impact on the business, but as part of our health and safety procedure all chemicals used will be noted in an inventory, which will be made accessible to all employees.
