

Description

The Grip is able to hold a wide variety of size and shape of accessories. Designed primarily to hold flash lights and bullet cameras with its flexible gripping system it can hold bullet shaped objects between 10-30mm.

These have been designed to break free if caught on a wire or taught rope to prevent damage to the wearers neck. We recomend using a lanyard to secure equipment fitted to the grips to prevent loss of items.

Design

Easily fitting into existing Gecko Open Face and Full Face helmets using a push to fit system, the adjustable vertical angle means it looks were you look and can also be faced backwards.

It can also be used in helicopter rescue scenarios by facing a flashlight signal straight up.
