Report Template Design Services

EHS Data fully integrates consulting and software and offers a full service to create your system and keep it running smoothly
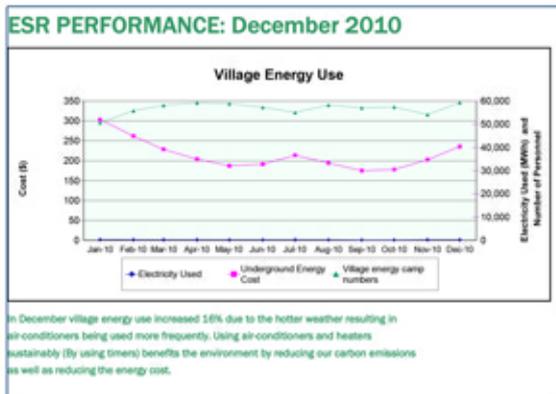

Report Template Design Services

Your Design,
Your Style,
Your Reports

**Report Template Design Services**

No two sites, geographies or industries are the same regarding their reporting requirements, from regulatory to internal reports.

Often these reports contain tens, even hundreds of charts, tables and graphs. Creating these reports manually can be labour intensive and subject to human error. Often MonitorPro reports can be provided which automates this process and can produce accurate, correctly formatted reports in seconds.

We have specialist report development consultants to assist with providing the report templates and other data outputs you need. Outputs can be in a variety of formats, from pdf to word, auto-generated web pages, Excel and more.

We design the template, it then plugs into your MonitorPro and when run it will populate itself with live data from your database. We can alter the design as requirements change, but also provide the template, so that you can edit as needed.

The Following are all examples of just a few of the report outputs directly from MonitorPro:

Our Team

The technical strength of our company is at the heart of our business. Our team have been recruited from not only in IT but also from environmental and technical backgrounds, and all have a long track record of using, administering and developing Environmental and Sustainability Data Management Software.

Our developers are experienced in the specific fields of EHS data management, from waste management to contaminated land, mining and general industrial site monitoring. This enables the company to develop highly relevant solutions and quickly understand our clients' needs.

Mark Cheetham
Senior Environment Manager at Waste Recycling Group, UK

"We have been using Monitor Pro for many years to manage our large quantities of environmental data & found it excellent for importing, storing & reporting to our many stakeholders. We have benefited from EHS's flexibility and willingness to continually develop the product to meet changing demands."

Lorna Gibbs
LTP Compliance Manager, Waste Recycling Group, UK

"I can now collate data from any database that I have access to, report it in any way I like, and schedule said reports, text alerts and compliance breaches etc to anybody I like as often as I like. In fact I'm at a loss how to fill my time!"

Andrew Nash
Environmental Compliance Co-ordinator, Landfill Group, UK

"As reports can be directly downloaded from the database, this means there is very little effort required to collate the routine data submissions to the appropriate authorities, including the EA. The graphing function can also aid greatly with understanding trends when assessing control/trigger level exceedences or writing Annual interpretative reports."
