TYRE CHANGING EQUIPMENT EDITORIAL FEATURED IN TYRE TRADE NEWS AUGUST 2015 EDITION

Newly launched by Snap-on is the Boxer BB2200 tyre changer, which is ideal for independent garages and workshops wanting to move into tyre changing.

The single-speed BB2200 comes as standard with a pneumatic assist arm and has a tilt back column, along with a traditional steel mounting/demounting tool and plastic insert, while it has an outer clamping range of ten to 20 inches and can deal with wheels with a maximum diameter of 79 inches.

Additional features include a side-mounted bead breaker, handheld tyre inflator and plastic rim protector, among other items.

It is designed for cars, light trucks and motorcycles (adaptors needed for some wheels). Optional accessories are a quick exchange device with plastic head and a set of four motorcycle wheel adaptors.

Complementing the BB2200 is the Boxer BB4100 digital display wheel balancer, which offers a 1D SAPE (semi-automatic parameter entry) for input of wheel offset and the ability to hide weights behind spokes for a better-looking finish.

Both products, which include innovative features and a wide range of benefits to users while also providing excellent value for money, are available from the start of July through Snap-on's network of HOFMANN garage equipment distributors.
