

ECOCLEAN® AFE

Alternative Filter Elements for other manufacturers Compressed Air Filters

KONTREC® AKF

Alternative Activated Carbon Filters for other manufacturers Oil/Water Separators

ECOCOMP®

Alternative Filters for Compressors and Vacuum Pumps

ECOSERV

Service Parts for other manufacturers Adsorption Dryers

AFTERSALES

KSI Alternative parts for products from other manufacturers

Top Quality for an Exceptional Price - Always Available.

The core business of the compressed air industry, besides the design of new installations, providing advisory services to the final customer, and the installation of new equipment in a compressed air station, is service and repair of existing installations. In this business area it is again important that industry can absolutely depend on the highest quality of the replacement components, and on their ease of availability.

KSI meets these requirements for service parts for its own products as well as additionally for products from other manufacturers. At prices far below those of the original manufacturer and quality that at least matches that of the original parts and in many cases exceeds them. In most cases parts are available for shipment the day of the order.

KSI Manufacturing Competence – also for Alternative Service Parts

Since its establishment KSI has been offering alternative products for servicing the equipment of other manufacturers in the compressed air and condensate technology sector. This business has been expanded and perfected continuously over the years. KSI service parts for third party products are manufactured in-house by KSI:

- **ECOCLEAN® AFE** Filter elements and cartridges for compressed air filters
- **KONTREC® AKF** Activated carbon filters for oil/water separators
- **ECOSERV** Service parts for third-party dryers

Or taken directly from OEM production:

- **ECOCOMP®** Filters for compressors and vacuum pumps
- **ECOSERV** Service parts for third-party dryers

With production largely in-house, KSI is in control of quality assurance. Modern test stations continuously ensure the highest quality without exception. KSI competence goes beyond the basic delivery of all required components for the service of the compressed air equipment. Already at the customer request stage we provide advice and make our extensive experience available to the industry with our qualified teams. KSI staff train the employees within the industry in servicing the KSI product range. If required the training can also be extended to products from other manufacturers (compressed air filters, adsorption dryers with heatless and heated regeneration).

Contact us!

Very Important: Availability

At the KSI headquarters in Niederkrüchten thousands of components are held in appropriate numbers in order to be able to provide the fastest response possible. In most instances products leave our warehouse on the same day the order is placed. UPS, the leading global logistics company, collects the goods in the evening for delivery to our customers on a next day service. Various guaranteed delivery times are also available upon request.

KSI provides very competitively priced delivery charges throughout the UK.

Complete Support

Competent team members within KSI provide quick and reliable help regarding questions concerning different service parts:

- Cross referencing original part numbers to KSI service parts
- Identification of original parts based on drawings and/or samples
- Reproduction from samples or drawings for specialist situations

ECOCLEAN® AFE

Alternative filter elements for other manufacturers housings

KSI delivers filter elements and filter cartridges for almost all filter housings on the market from other manufacturers. We produce all of the filter elements for our compressed air filters and all alternative filter elements and cartridges in-house. This ensures complete control for safeguarding our certified KSI industrial equipment quality.

4

KONTREC® AKF

Alternative activated carbon filters for other manufacturers oil/water separators

The fact is that **KONTREC® AKF** has been used in most oil/water separators from various other manufacturers for the past 17 years. This is because KSI has been producing these important components according to the highest quality criteria since the company's founding. More than 22,000 KSI activated carbon filters are produced each year and shipped globally. This corresponds to almost 100 tons of the highest quality activated carbon.

6

ECOCOMP®

Alternative oil filters, air filters and separators for compressors and vacuum pumps

Customer-oriented, KSI has been delivering filter and oil separators of OEM quality for compressors efficiently and reliably since 1998. In order to make this a reality, we provide an enormous storage area of 1300 m2 just for this product group. 96% of orders are shipped the same day.

8

ECOSERV FT

Functional parts and service packages for the service of other manufacturer's heatless & heat regenerated adsorption dryers

The new **ECOSERV** series contains all components for the service of other manufacturer's adsorption dryers with heatless & heated regeneration. At the same time KSI offers its customers **intelligent service packages** for other "third party dryers". These contain all of the components necessary to complete a service, similar to that of the original manufacturer.

10

ECOSERV TM

Desiccant packages for the service of other manufacturer's heatless & heat regenerated adsorption dryers Service help from trained personnel for KSI's industrial partners

Desiccant packages of the best quality for almost all adsorption dryers with heatless & heated regeneration on the market are supplied in matching containers. KSI exclusively uses adsorbents from well-known German manufacturers.

We also offer the industry service support for "third party dryers".

12

ECOCLEAN® AFE

Alternative Filter Elements for other manufacturers Housings

Filter Compressed Air and Gases Cost Effectively and Reliably with KSI ECOCLEAN® Filter Elements.

In modern compressed air systems the quality of the compressed air is the deciding factor. Compressed air filters ensure that solid particles, oil components, condensate, oil vapour, odours and other contaminants are safely removed from the compressed air system. The core piece of a compressed air system is the filter insert (element) that has to be matched to each application.

KSI produces all of the filter elements for our compressed air filters and all alternative filter elements and cartridges in-house. This ensures complete control for safeguarding our certified KSI industrial equipment quality.

The ECOCLEAN® Approach to KSI Filter Elements

The combination of operational safety and cost effectiveness perfectly implemented in one product is KSI's starting point for ECOCLEAN® high-performance filter elements.

Simply the best Alternative!

The customer enjoys all of the advantages of the ECOCLEAN® filter elements, not only if the filter elements are used in an ECOCLEAN® compressed air filter, but also when they are used in almost all of the housings from other manufacturers that are on the market.

An additional plus – KSI offers these filter elements at prices that are up to 30% lower (than qualitatively comparable filter elements on the market).

validiert und zertifiziert
Klasse I nach
ISO 8573

Alternative Filter Elements with a Double Advantage

Reliability

1. Optimum Operational Reliability

Filter Element

- A** Special compound adhesive securely fixes the end caps to the stainless steel support cages and the filter media.
- B** The **ECOCLEAN®** high performance media is securely fixed and supported between stainless steel support cages.
- C** The plasticizer-free plastic end caps prevent corrosion. This means no efflorescence and no increased bacterial growth.

High Performance Filter media

- D** The filter drainage layer made of special fleece stabilizes the filter media and prevents efflorescence and cracking – meaning it safely counteracts the loss of filtering action.
- E** The high-performance filter fleece has a high chemical, mechanical and thermal loading capacity (up to 120° C), and it is silicone-free.

Costs

2. Maximum Cost Effectiveness

Filter Element

- A** The specially designed interior and exterior **ECOCLEAN®** support cages achieve up to 45% less differential pressure as compared with conventional support cylinders.

Energy Saving Filter Media

- B** The KSI high-performance element achieves maximum filter surface area through the specially optimized winding of the filter media. The construction-based surface filtration, in contrast to the usual 2-layer pleated elements, achieves a significantly higher internal surface area (filter depth volume) for maximum depth filtration. Due to this very high depth filtration capacity of **ECOCLEAN®** filter elements the differential pressure rises very slowly, giving longer life and reduced energy costs.
- C** The media depth volume ensures the highest contaminant removal, whilst allowing maximum filtration performance.

KONTREC® AKF

Alternative Activated Carbon Filters for other manufacturers Oil/Water Separators

Typical for KSI: High cost savings and reliability through top quality

Due to the nature of the process, compressor condensate is always part of compressed air generation. It consists of all the materials that the compressor draws in. Moisture (water), particles, dust and air components from industry, traffic and private households, e.g. SO₂ and hydrocarbons. Oil from the compression element of lubricated compressors can always be found in the condensate, depending on the type of compressor and the oil used.

The degree of compression is the determining factor regarding the stability of the oil/water mixture. The higher the pressure, the more stable the mixture. In the end the performance of the activated carbon filter used is the deciding factor. The oil/water separator has to ensure that only pure water reaches the sewer.

The Market Leader, with the best Price-Performance Ratio

There are about a handful of manufacturers of oil water separators offering a good solution for the treatment of condensate. The basic principle has been tried and tested for decades, with only minor differences in the details. In the end however, it all depends on the quality of the activated carbon, such as **KONTREC® AKF** in the oil/water separators that ensures adherence of the water quality to regulatory requirements.

In fact **KONTREC® AKF** has been used in most manufacturers oil/water separators for the past 17 years, and for a very good reason. This is because KSI has been producing these important components according to the highest quality criteria in-house since the company's establishment. More than 22,000 KSI activated carbon filters are produced each year and shipped globally. This corresponds to almost 100 tons of highest quality activated carbon.

The KONTREC® AKF Plus-Effect +++

- + process-induced high performance => best adsorption
- + highest adsorption capacity => maximum filter service life
- + maximum cleaning safety => for waste water discharge conforming with local directives
- + absolute dimensional accuracy due to quality control => prevents bypass flow
- + 4-layer seam and tear resistant PE sleeve => filter strength and dimensional stability
- + quick delivery, best quality, good price

KONTREC® AKF – in stock for most oil/water separators

KSI has filter sets available for all common oil-water separators. These filters are available in the exact configuration required on-site. In other words, all pre-filters are included in the package.

Alternative Filters for Compressors and Vacuum Pumps

Top Quality from OEM Production: KSI Oil Separator Cartridges, Oil and Air Filters

Compressed air has established itself today as a safe and economical energy besides electricity. For that reason compressors and vacuum pumps are used in various application areas of construction, electrical engineering, pharmaceutical, foodstuff production and mechanical engineering. High-performance oil separation cartridges as well as oil and air filters of the best quality are the deciding factor to be able to operate these expensive and important installations safely and economically over the long-term.

ECOCOMP® => highest quality for the demanding protection requirements of installations and processes

Customer-oriented, KSI Filtertechnik GmbH has been delivering filter and oil separators of OEM quality for compressors since 1998 quickly and reliably. In order to make this a reality, we provide an enormous storage area of 1300 m² just for this product group. 96% of orders are shipped the same day. This reflects KSI's claim regarding continuous improvement. All filter products are designed for optimum performance and continue to be developed for each application.

Time is money – quick delivery is therefore an obligation

Our ability as a supplier extends to over 6000 original references. This means that you can find the required products directly in our price list. Should you require a filter or an oil separator cartridge that contrary to expectations cannot be found in the KSI price list, we will cross reference it as quickly as possible, based on the original part number, the compressor or pump type, or on the basis of the dimensions - promise. "Your product" will then be entered directly into the price list, which is revised every 2-3 years. Do you have questions? It is our pleasure to advise you.

Test us!

The ECOCOMP® Plus-Effect +++

- + the process-based best performance
- + maximum filter cycle times because of the best filter materials
- + long-life, robust industrial quality
- + protects compressors, vacuum pumps and compressed air systems

Quality Oil Separator Cartridges

Operational Perfection with Convincing Results

ECOCOMP® oil separation cartridges work highly efficiently according to the coalescence principle. This process starts at the sub-micron range. A high-performance glass fibre medium retains tiny colloidal oil droplets, and its specific properties ensure that many small oil droplets merge to a few large oil droplets which can then drain off the glass fibre medium and return to the oil circulation as a result of gravity. The result is effective oil separation with minimal oil use for compressor installations and vacuum pumps.

At the same time the introduction of oil into the compressed air network is significantly reduced.

Steadfast to the End

Oil separator cartridges were developed for tough industrial use. Furthermore they are designed for all common lubricating materials (mineral oil, semi synthetic and fully synthetic oil). The life cycle of the oil separator cartridge is determined by the following factors:

- Contamination from the intake-air, metal abrasive debris, particles and oxidation products of the oil affect the performance of the oil separation cartridge over time. Because the cycle time, and therefore the service life, is determined by the amount of contamination, this in turn causes an increasing differential pressure in the filter.
- A timely exchange of the air and oil filter elements usually extends the service life of the oil separator cartridges. The selection of the oil used has the same effect. Oxidation-resistant and water-proof oils have proven themselves.
- The operating conditions of the installation are the deciding factor regarding cycle time. This involves as much the external temperature, oil temperature and installation cooling as it does the quality of the surrounding air and its material content that is detrimental to oil.
- **ECOCOMP®** oil separator cartridges are produced with the greatest of care, and for that reason offer high operational reliability, installation protection and cost effectiveness, which are indispensable for the effective operation of compressed air installations.

ECOSERV

Service Parts for other manufacturers Adsorption Dryers

Functional parts and service packages for the service of other manufacturer's heatless & heat regenerated adsorption dryers

KSI, as one of the top names in the industry for the supply and treatment of compressed air, in particular for filtration and drying, is continually expanding its product portfolio with customer service and value for money in mind.

For instance, the new **ECOSERV** series contains all components for the service of other manufacturer's adsorption dryers with heatless & heated regeneration. At the same time KSI offers its customers intelligent service packages for other "third party dryers". These contain all of the components necessary to complete a service, similar to that of the original manufacturer.

ECOSERV => Highest-performance original parts and quality fillings

Over the last few years KSI has turned into one of the most competent partners in the area of adsorption drying. For that reason it was reasonable to also develop a product line in the area of replacement parts and service packages for heatless & heated regenerated adsorption dryers and active carbon adsorbers from our competitors, in order to establish a more intensive bond with the industry and the service operations. By assembling the **ECOSERV** product line we addressed one of our customers biggest wishes. The result is high-performance original parts, quality fillings and KSI intelligence packages. The "**ECOSERV I**" KSI service packages facilitate the whole service process, making it simpler and less cumbersome. Not only the 12-24-48 month service parts are included, but also components such as filter elements, mufflers and valves that usually have to be ordered separately. KSI "**ECOSERV I**" is just more.

The **ECOSERVE** will be continuously expanded and developed in the coming years.

The ECOSERV Plus-Effect +++

- + highest-performance original parts
- + Quality desiccant packages from well known German manufacturers
- + KSI intelligence packages facilitate the industry in the assembly of the necessary service components
- + The KSI competence team provides full support for all aspects of the service of other manufacturers adsorption dryers.

ECOSERV

Desiccant Packages for Adsorption Dryers

High performance desiccants guarantee operational reliability

The desiccant fillings for adsorption dryers with heatless & heated regeneration are structured according to adsorber type for all pressure dew points and applications, and are supplied as a substitute filling for the adsorption dryers from other manufacturers. KSI exclusively uses desiccants and adsorbents

from well-known German manufacturers, for example BASF. The highest-quality materials are in this case also the KSI standard, because poor alternatives often do not yield the desired or necessary result. As usual, KSI nonetheless also provides here a good price performance ratio.

KSI desiccant package comparison using the example of the Zander KEN 200 - KEN 500 series since 05/99

KSI Service Support

The KSI “Adsorption Dryer Competence Team” fully supports it’s industrial partners. In case of any questions during a service or repair on an adsorption dryers with heatless or heated regeneration from other manufacturers, KSI associates will be glad to support you at any stage of the service work. We can help to avoid possible errors at the quotation stage for service work.

Use our experience and competence.

Training for service and repair, even for other manufacturers adsorption dryers

Besides training on KSI heatless & heat regenerated adsorption dryers, KSI offers training to industry service technicians on other manufacturer’s adsorption dryers.

Learn new things during training, convince your customers.
