

ROTEC

HAULERS

Rotec produces a number of different models of concrete haulers. Rotec Haulers have a significantly larger capacity than the average hauler allowing for a constant stream of material to be moved to the conveyor systems. Rotec produces the Hi-Boy, Big Dog, Hog Dog and Pay Hauler models, able to carry 12, 16, 24 and 40 cubic yards respectively. Each hauler is mounted on heavy duty Mack truck chassis known for their durability and safety, and are able to operate under off-road and harsh job site conditions. The haulers have a unique design with a hydraulically activated tub cover which allows for easy fill from mix plants. They also have an internal auger to facilitate discharge and hydraulically controlled discharge gates. All of this allows for smoother transitions from plants and easy integration into Rotec Conveyor Systems.
