

PROUDLY PRESENTS:

Ultra Smart Complete Round Wipes in Canisters Packaging Line.

- As little as 2 operators from the master roll to a canister packed in a box
- Throughputs offered in 60, 120 and 200ppm

Come visit us at booth 2261 for our first-ever live SAS120 demo!

It is a truly revolutionary high-speed vertical round wipes canisters stuffer and worlds first to empirically triumph the process in such speeds and accuracy levels.

The SAS120 is offered in throughputs of 60, 120 or 200 products per minute. It feeds the round wipes vertically into a 90° chute to the main servo-driven rotary turret where a pneumatic piston pusher stuff each roll accurately into its designated canister. Saving downtime, it is designed for ultra low sub 30 minutes changeover and can stuff canisters with rolls that don't have to be tighter, but may actually be wider by up to 3mm than the canister outside diameter, a big plus.
