

Securely managed and resilient IoT connectivity

Tailored to high-data usage applications

Complete visibility of data usage and flexible cost control

Dedicated support

## Single & Multi-Network SIMs for High-Data Applications

M2M Intelligence are delighted to announce a new set of high-data connectivity packages, providing highly competitive rates. These solutions are configurable for single-country network (O2), multi-network (O2 Resilient) and EU-wide roaming and are tailored for **vehicle fleets or static devices**.

Suitable applications include; enhanced vehicle, home/building asset protection, insurance, security, lone worker protection, or where providing added-value services to customers. For instance:

- Vehicle **dashcam**,
- **CCTV** and property **video-surveillance**
- **Critical incident camera systems**
- **Bodycams**
- **Static or mobile routers/gateways** (offering local Wi-Fi services to staff and/or consumers).

M2M Intelligence's solutions are ideal for those applications requiring; high levels of **geographical coverage**, safety/critical assurance, **system resilience** or high quality of service. M2M intelligence can also provide a **secure VPN** to aid remote management of these devices.

**M2M Intelligence's systems** are developed to provide IoT service providers with complete visibility and control of the connectivity of devices. Our simple web-portal gives access to a highly-sophisticated management system. By enabling the viewing, controlling and reporting of the connectivity status or individual or groups of SIMs, we assist customers to assure the real-time, critical day-to-day connectivity of devices. The system also provides detailed reports; **predictive data** is used to generate configurable warnings and alerts, whereas traffic records are presented for more detailed analysis. The system also provides a powerful set of editable functions and **API's**.

### About M2M Intelligence:

M2M Intelligence brings together a team of experienced global telecoms professionals with a vision to deliver engineered solutions and the highest levels of service to customers. M2M Intelligence have substantial numbers of SIMs which are deployed globally within a diverse array of IoT applications & infrastructure projects. Our team therefore has extensive experience of working with a variety of types of devices, and managing their connectivity/network-access.
