

RAM Spreaders Launches PinSmart II

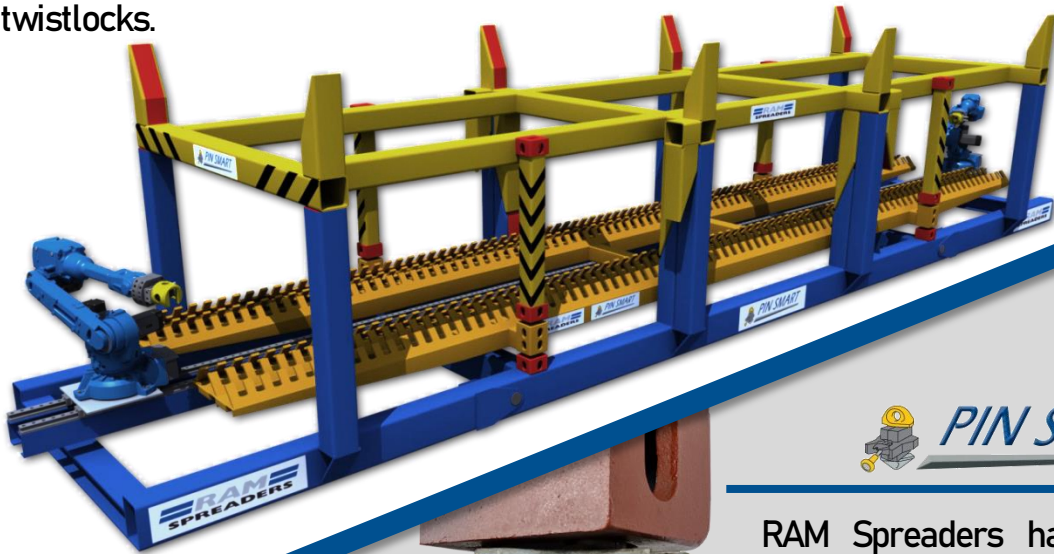

Fully automated twistlock handling and storage system

Container terminals remove and fit more than 2 billion twistlocks from shipping containers, in what is a dangerous, slow and expensive job.

The new PinSmart II twistlock handling system fully automates all aspects of twistlock handling and storage.

PinSmart II takes as little as 10 seconds to remove or install any twistlock model and place or pick the twistlock from the storage racks which has a capacity to store up to 2000 twistlocks.

RAM Spreaders have been testing the system extensively on more than 50 twistlock model types for the past 2 years.

The full-sized proto-type is available for demonstrations at RAM Spreaders Singapore facility from Q4 2019.
