7 Reasons to Upgrade Your System

If you have an old HVAC system that's still working, you may wonder why you should consider replacing it. If it's broken, replacement is a no brainer, but if it's humming a long, even though it's old, why bother. We get it; Heating and cooling systems are not cheap. Truth is however, from energy efficiency to smart device integration, there are many reasons why investing in a new HVAC system just makes good sense. Here are a few reasons to consider upgrading your old system.

Aging System

The average life span of an HVAC system is about 17 years. That is, if your system receives proper maintenance. Skipping maintenance can shorten its lifespan, so make sure you replace air filters and have your system serviced a couple of times a year. Investments in new energy efficient HVAC units often pay themselves back in 2-3 years. Make sure when replacing your system to have your installer look at your ductwork as poor ductwork can

seriously impact the operation of a weak system.

Improved Comfort

New HVAC systems offer improved air flow and can better regulate the temperature throughout different rooms in your home eliminating the problem of rooms being too hot or too cold. New variable speed units improve the air and the consistency even without major ductwork changes.

Better Air Quality

An important function for an HVAC is managing a home's indoor air quality. Your system is providing ventilation, maintaining the humidity level at an acceptable level as well as filtering small particles out of your air. Because today's homes are built to be air tight for energy efficiency, the air inside your home can be up to 5 times more polluted than outside air. Today's systems offer add-ons like whole home dehumidifiers, air purifiers and air filters. These add-ons not only capture minute particles in the air, they are capable of scrubbing the air and destroying

harmful vapors, molds and germs. The result is a cleaner and healthier living environment.

Smart Device Integration

Today's smart technology makes HVAC systems more convenient and energy efficient than ever. With devices like smart thermostats, you can program an efficient heating and cooling program that fits your family's lifestyle. What's more with a smart app, you can manage your system from anywhere in the world.

Increased Resale Value

When looking to purchase a new home, buyers always consider the age and condition of the HVAC system. They consider how long it will be before they must pay for a system replacement, maintenance costs on an older system and energy efficiency. If your home has a newer energy efficient HVAC system that will be an attractive feature for a potential buyer and add value to your home.

Repair Parts May Not Be Available

Since HVAC technology has made great technological strides in the last few years, repair parts for old systems can be difficult, if not impossible, to locate on some models. As a result, these outdated pieces will be more expensive, if available at all, and multiple expensive purchases could easily add up to the cost of upgrading the HVAC system. Investing in a modern HVAC system may not only offset high repair costs, but will likely also reduce the need for repair work altogether.

Financing Available

Climate Control offers convenient low monthly payment options with approved credit. So why not upgrade your HVAC equipment today!

Save **\$100** ON A FURNACE REPLACEMENT

Or \$250 on Furnace and AC Replacement

SINGLE USE ONLY. CAN NOT BE COMBINED WITH ANY OTHER OFFER. CALL FOR MORE DETAILS.

Climate Control Can do That!

We hear from people all the time

“I didn’t know YOU did that”

So we wanted to share all the ways we can help you!

-  We work on all makes and models of heating and cooling equipment.
-  We do installations in your new home or we can replace your old equipment in your existing home.
-  We do geothermal installations and will work with your contractor to provide the best solutions.
-  We have a Master Electrician on staff to help you with any electrical needs you have!
-  We do plumbing - give us a call to fix your problems.
-  We do Fireplaces, Fire pits, & outdoor heat & light
-  We do ductless systems, If you don't have central air or heat, a ductless system may solve your heating and cooling needs especially on additions.
-  We install humidifiers, dehumidifiers, and we can help with your indoor air quality.
-  Covered in dust? We have dust control to apply to your gravel roads to keep it under control.
-  In the dead of winter when the ice just won't melt - we've got you covered there too with Ice Melt.
-  Concerned about radon in your home? Rent a radon detector & if your levels are above the recommended pCi/L we can help with radon mitigation.

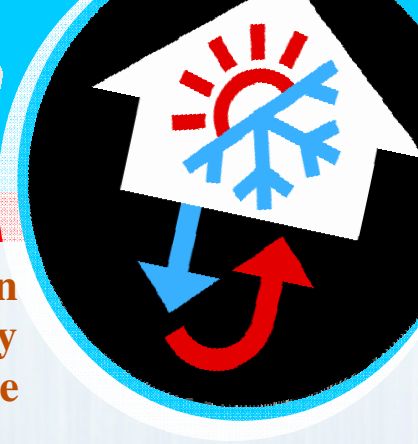

If you aren't sure we can help –just call and ask, we are happy to provide you with our professional recommendations as well
