Automatic Number Plate Recognition (ANPR) for School Vehicle Management

The John Hampden Grammar School was established as the Schools of Science and Art to provide an outstanding education, for young people, near High Wycombe. One of the school's objectives is to provide a safe and secure environment. To achieve part of this objective, the school required a modern CCTV system with Automatic License Plate Recognition (ANPR) and they chose Prime Digital to deliver this system.

Prime has been regularly upgrading the school IP CCTV system over several years and the ANPR extension was required to help manage site traffic. Phil Bradshaw (Site Manager) said he needed one or two cameras to on the main gate to capture the vehicles and their license plates.

Prime initially installed one ANPR camera to cover one gate and some of the other gate and Phil said the images of vehicles and the plate recognition accuracy were brilliant.

Once the ANPR system had been in operation for a few weeks, Prime provided a series of operational reports to help with site traffic management. Brent Hills, Prime's MD, said that these reports are completely flexible and can be modified to provide any required traffic management profiles for any number of vehicles.

Phil said that he was "very impressed with Curtis as an engineer and he did a nice neat job with good customer relations"
