

Going strength for strength we have launched our **Digital X-ray Inspection System Upgrade Services**. Our first customer to use this service is a **multinational manufacturer of high end industrial grade electrical fuses**.

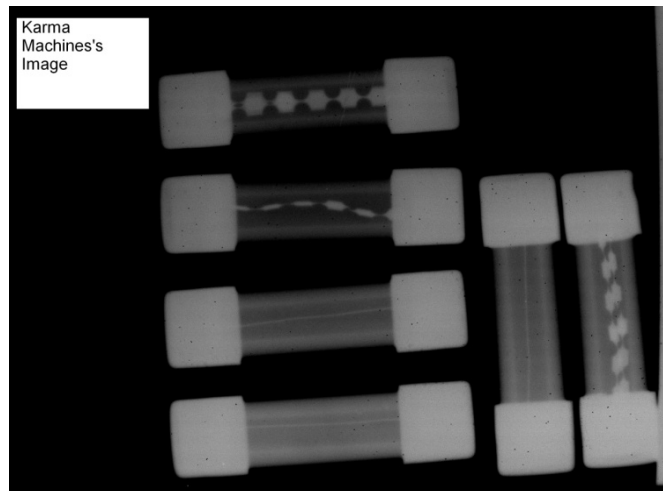

They were finding it difficult to operate their existing system as the images were not sufficient for quick and easy decision making. The time taken for the operators to detect the defective components and back tracking for the components removal was very straining and hence consuming a lot of time.

Our Solution

The Karma team worked in close association with the prospect to consider various needs and evaluated several options based on quality, convenience and cost.

The final solution decided was to **Upgrade to Karma's Sensor** and to supply an **Automated Component Inspection Table**. This solution has twin benefits:

1. Better Clarity & Resolution images (See the hexagonal fuse element & thin gauge filament inside the ceramic holder in Karma's Image. This is not visible in the existing system) → Ease of Decision Making for the Operator → **Effective Quality Control**

2. Better Tracking → Faster Defective Component Removal → **Higher Inspection Efficiency**

Karma Innovations & Solutions Pvt Ltd's expertise in providing automation solutions was a major strength to offer the optimum solution to our customer.

Customers Achieving Higher Effectiveness and Higher Efficiency go with Karma's Policy of Working Empathetically with Our Customers to Deliver the Maximum Value.

In case your company has a need related to Digital X-Ray Inspection Systems, please feel free to mail/call us.

Best regards,

Karthikeyan J
