POWERING

THE NATION SINCE 1995

Established in 1995, we supply superior-quality generator installations for projects of all sizes, ranging from domestic houses to commercial establishments, datacentres and hospitals, and even the National Grid.

We have 60 years' combined experience in generator installations, mechanical engineering, electrical installation and steel fabrication and we have successfully fulfilled numerous projects both in the UK and as far afield as South Africa and Siberia.

We take pride in providing the highest quality in all that we do, and no matter how small or large your installation, you can be

confident that we will go out of our way to make sure we exceed your expectations.

We are extremely aware of the challenge and complexity of logistics, and we put extra care into ensuring our projects run like clockwork. Without compromising on attention to detail, we run all our projects with regimental efficiency, always finishing on or even before time.

QUALITY

THAT DOESN'T COST THE EARTH

We pride ourselves on the high quality, efficiency and sustainability of our range of generators, and continually work to improve what we offer. You can be confident that our cost-effective generators are built to the highest specifications and provide the ultimate in reliability and durability.

As well as factory-new diesel generators, we can also supply gas sets and buy and sell used and part-exchange generators - just ask us for more details.

Only the best

We know that our customers expect the best, and that's why we have put the utmost care into selecting suppliers whom we know will deliver the best products available. Himoinsa's outstanding reputation for sustainable, superior-quality yet cost-effective products, coupled with its excellent engine range and use of top engine and alternator manufacturers, make it an obvious choice. Robust and reliable, durable and safe, Himoinsa's generator sets offer superb value to customers with projects of all shapes, sizes and locations.

In-house manufacturing for fully bespoke installations

Our advanced in-house manufacturing facilities allow us to tailor projects to your exact needs, and mean we are able to maintain complete control over supply, building and testing prior to installation. This enables us to ensure that every element of the projects we work on is completed to the very highest level of quality.

We can supply a range of bespoke products, including acoustic enclosures and container housing for generators and switchgear, attenuators and exhaust silencers, as well as steel frameworks and fuel tanks - all designed and built in-house to ensure that they meet your precise specifications and live up to the high standard you expect across the board.

A ground-up generator installation solution

We can offer a total, ground-up solution for your generator installation, taking care of every aspect of the whole site – generators and acoustic housing, controls, switchgear and fuel systems - even the road-laying, cabling, fencing and substations. We have the facilities to manufacture containers and enclosures, fuel tanks, steel structural frames and more, but if you only need us to fulfil part of your project, that's fine too.

Intelligent monitoring for hands-on control

We understand the vital importance of your facility being ever-ready for essential emergency support. That's why we offer state-of-the-art control systems for 24-hour remote monitoring with many of our installations. Using your desktop computer or a smartphone app, you can choose to have round-the-clock access to remote control, testing and reporting functions that mean that wherever you are, you will always be able to check on the status of your facility.

You can choose which control system you use, but our preferred one is the open protocol ComAp system, which offers exceptional flexibility that allows you to integrate it with your existing equipment and internal systems with ease.

YOU'RE IN SAFE HANDS

At Ocktcom, we bring unparalleled expertise to the industry in which we operate. From small standalone generators to multi-MW Short Term Operation Reserve (STOR) power plants and Fast Frequency Response (FFR) that back up the Grid, our experience covers projects of every size and complexity, and makes us well-placed to fulfil your requirements.

Over the numerous projects we have worked on over the years, we have successfully overcome a huge range of project-specific challenges. We are not phased by tricky site locations, size and noise restrictions, fuel management issues or anything else, and nor are we worried about tight schedules. We have never missed a deadline and we run all our projects with military precision.

ComAp's comprehensive range of genset controllers covers applications from simple, manual/remote start, non-parallel generators through to complex, multi-generator synchronizing and load-sharing and CHP facilities. From IntelliNano^{NT}, a cost-effective unit that meets the needs of small applications, through to IntelliSys^{NT}, a sophisticated, expandable controller for difficult applications, ComAp control systems offer users excellent flexibility, simplicity and usability, with a controller for every application.

Ocktcom delivers projects of every size and complexity on a global scale

Peace of mind guaranteed

We care how you get on with our products, so we are committed to providing you with strong after-sales support. You can come to us for all the parts, servicing and maintenance you need, and you can even tailor-make your own servicing options to suit your exact requirements.

What's more, HimoinSA is so confident in the quality of its products that it offers a two-year limited warranty, subject to conditions.

Used generators

Ocktcom Ltd is also a leading player in supplying used generators worldwide, offering our customers high-quality used diesel generators and unbeatable after-sales service.
