

HOFMANN®

NOVEMBER 2015 – WHEEL ALIGNMENT FOR AFTERMARKET

Find out how much revenue you could potentially generate from a HOFMANN wheel alignment system via the interactive calculator at the HOFMANN website.

The service has been set up to work out illustrative weekly and monthly figures based on how many wheel alignments a workshop could carry out in an average day, and how much it would charge.

From there, the calculator pulls together potential revenue figures that are designed to show the possible benefit of a garage purchasing a HOFMANN aligner.

Workshops can get an individually-tailored example based on the information they enter and the service also allows users to request a call back from a HOFMANN area sales manager to discuss their requirements further and to arrange a no-obligation demonstration.

The figures given by the service are only intended as an illustrative example and are no guarantee of the revenue a workshop will generate. They are not a profit guide as they do not factor in overheads such as business and equipment costs.

Visit <http://hofmann.co.uk/alignment-revenue-calculator/> to find out more.
