

LOOKING FORWARD

New technologies of the polyurethane

POZZI INDUSTRIES
MADE IN ITALY

When the company was founded in the early fifties, Pozzi-Arosio used to manufacture and market paints.

In 1978 Pozzi-Arosio took over Saip, a leading company in the production of polyurethane equipment for all the different fields of application.

In 2012 Pozzi Arosio was accredited the UNI EN ISO 9001:2008 with the prestigious International Institute TUV RHEINLAND.

Pozzi-Arosio was among the first in Italy to enter the polyurethane field.

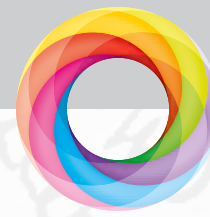

From the beginning Pozzi-Arosio has opened commercial branches in the places of the world where there was a real operational need.

In 1978 Pozzi-Arosio took over INTER TRADING, a trading company

MISSION & TECHNOLOGY

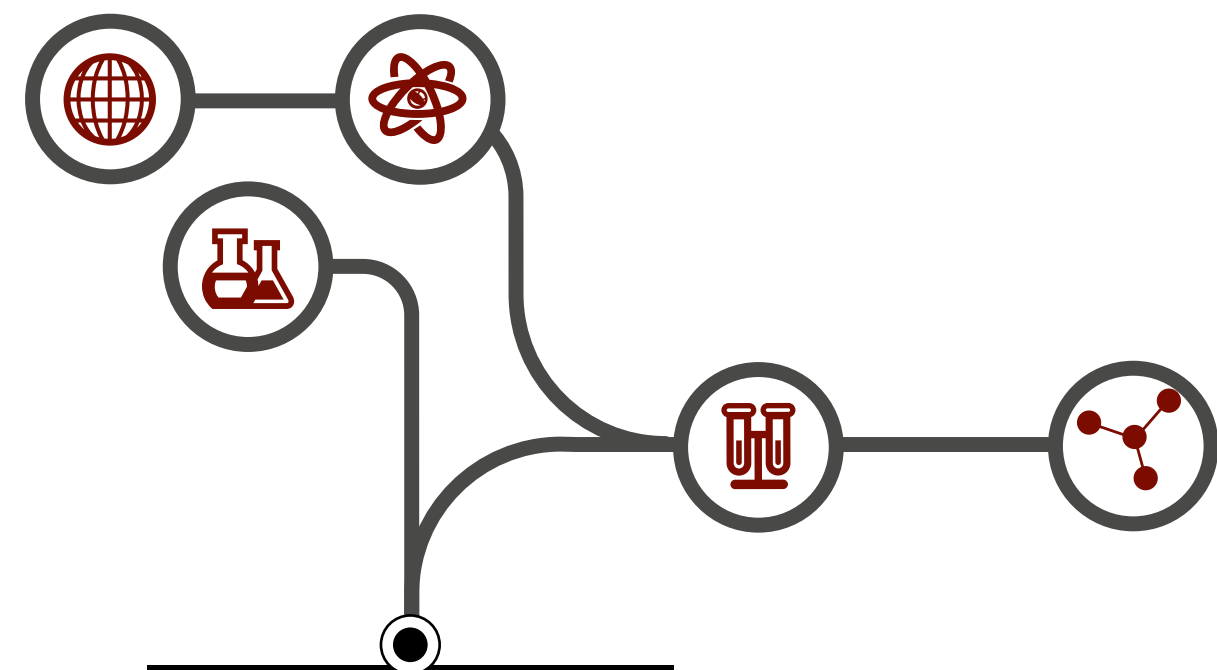

WHY PU?

MAIN CHARACTERISTIC AND PLUS

- High quality standard for complex shapes
- Traditional productions costs dramatically reduced
- Excellent surface appearance
- Density from 150 up to 1100 gr/lt
- HCFC Free (Hydrochlorocarbon fluorates)
- Over 50 years of technical research in furniture
- An admirable surface for every singlepiece
- Complexity of the shapes
- High mechaical standards
- Excellent flow
- Surfaces without imperfections

FLEX FURNITURE

HARD FURNITURE

WHY PA?

Pozzi Arosio: STRONG POINTS

- More than 50 years in furniture business market
- A specific and dedicated team in developing furniture solutions
- PU Systems Formulators
- Tailor made projects

«It is not wood, it is moulded wood»

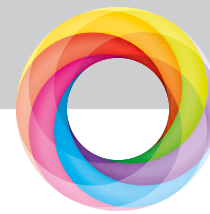

Angelo Pozzi, co-founder Pozzi Arosio

«It is an expression of my ideas»

Architect Joe Farcus, Carnival Cruise Project Manager

«Easy to produce, fast to produce, high quality: is this the future?»

Producer Carlos Ruiz Riva, Roncali Decor Company, Brazil

EQUIPMENT

The correct equipment

- Foaming machine at high or low pressure
- A multiple-pieces complete carousel can be place projected to obtain a high number of prints per day

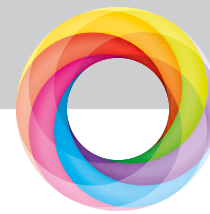

RESEARCH

celdelpa is a unique, state-of-the-art and industrial-scale line fully devoted to testing and prototyping activities, conceived to allow players in the construction industry worldwide accelerate the development of novel solutions for the manufacturing of polyurethane-made panels for thermal insulation produced with the specific technology of continuous double lamination process.

DECORATION

“Everything comes from water”: DipPrint® is a three dimensional immersion graphic water decoration technology for any kind of surfaces and material such as plastic, metal, wood, polyurethane, glass.

It is the only existing printing technique for irregular surfaces keeping pattern unchanged. Dip Print® uses special pigments laid on a water-soluble film to draw the decorative pattern, with a minimum impact on the environment.

ELECTRONIC

Industrial Electronic Solutions for automation.
Providing customers with support for the electronic components and software.

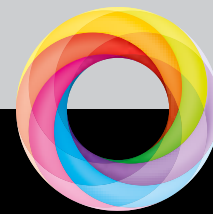

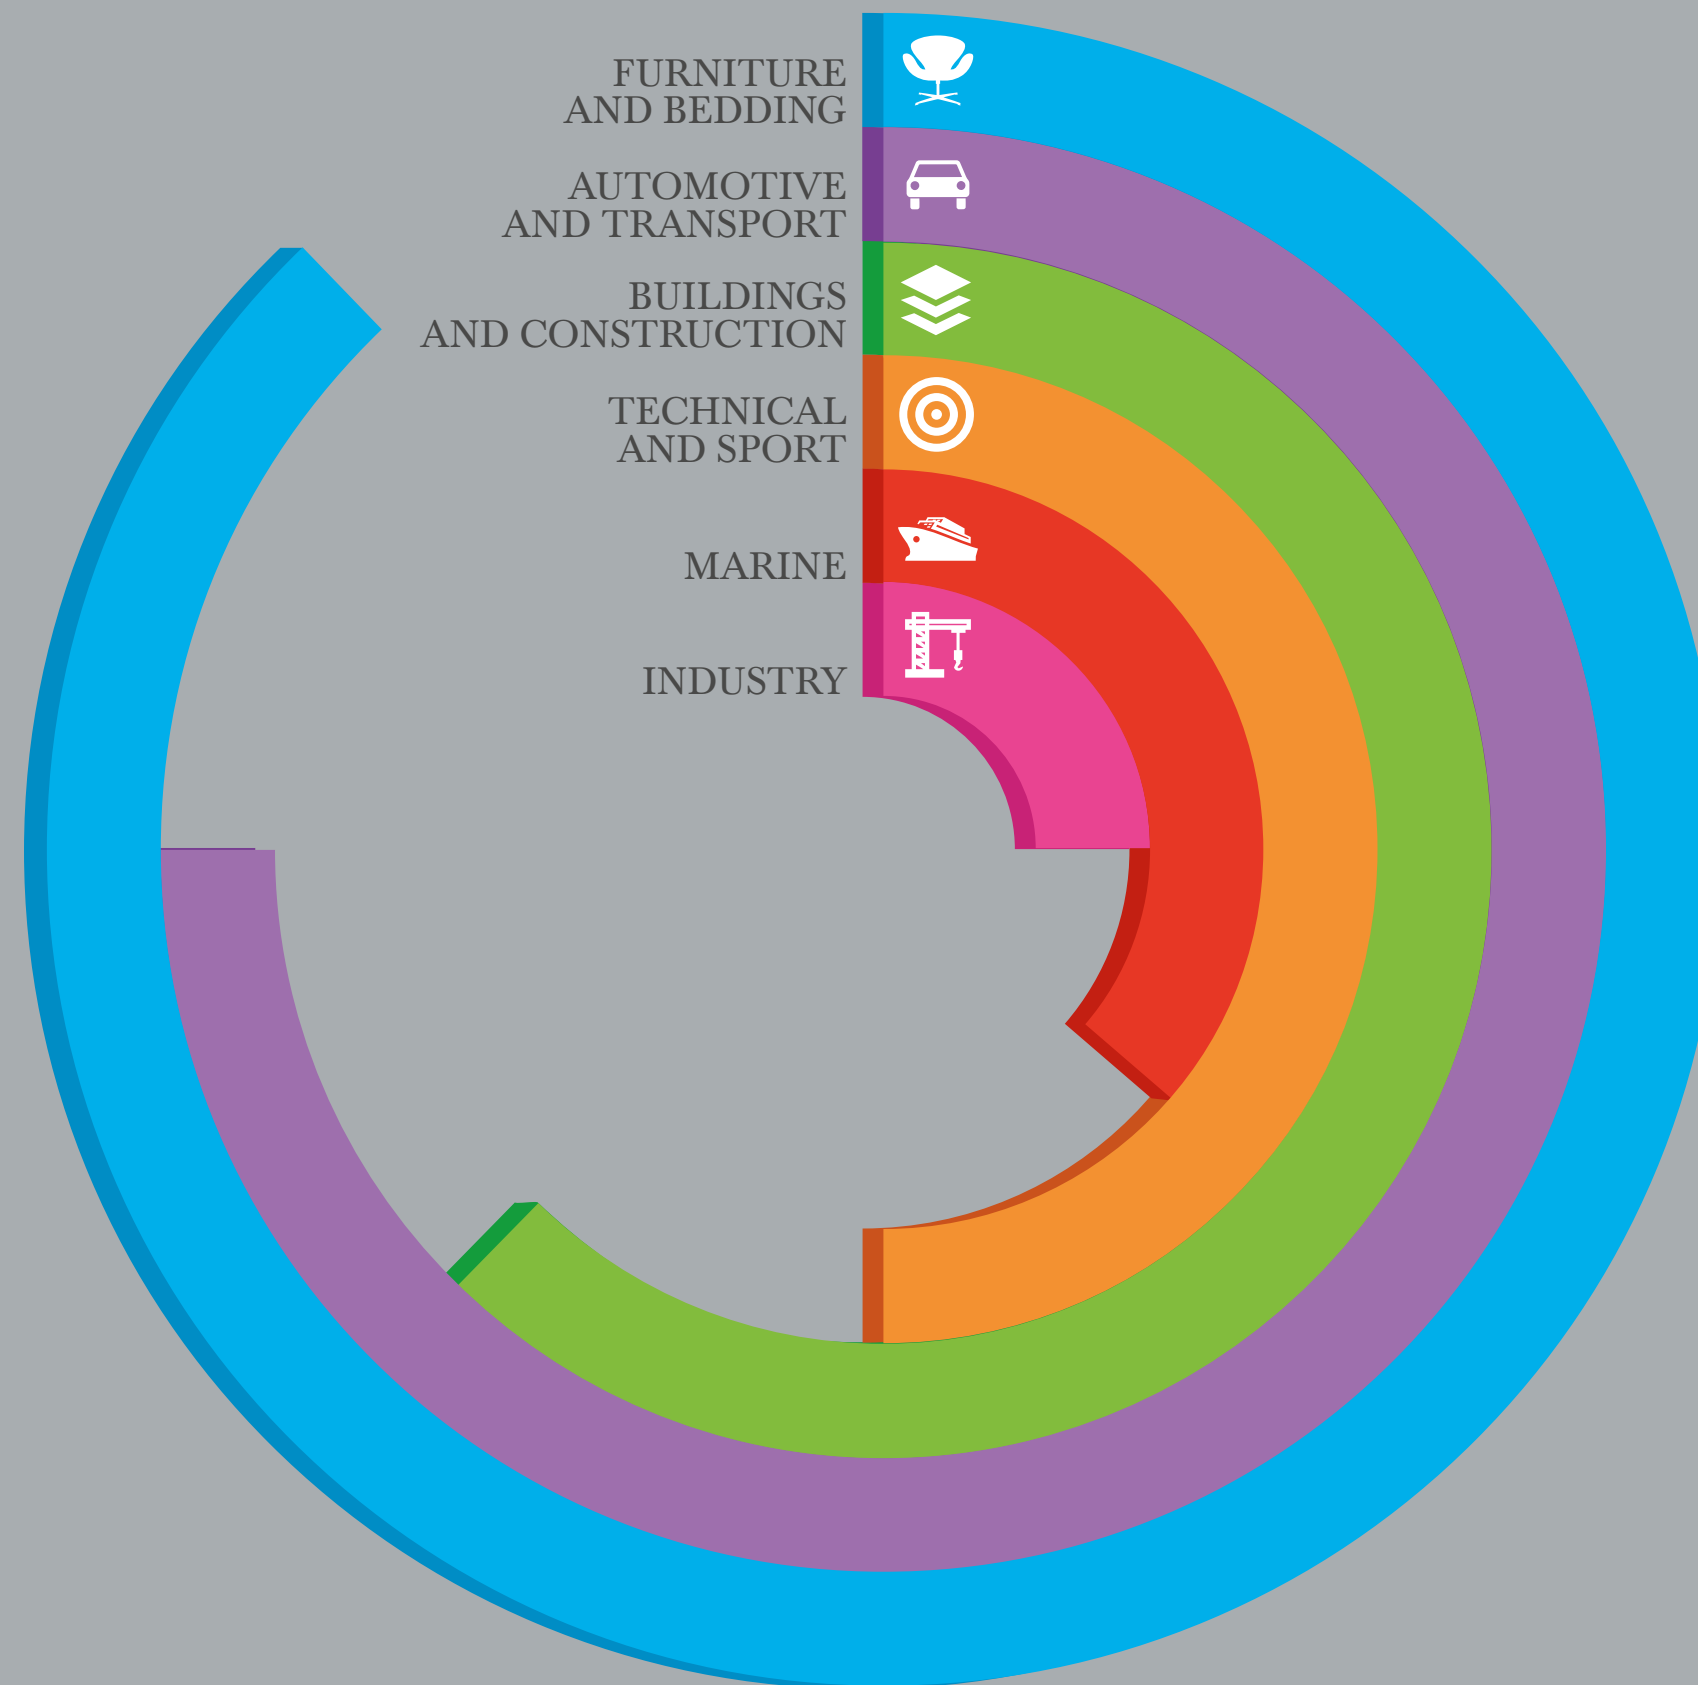

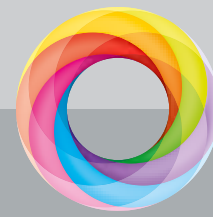

TRADING

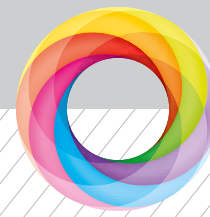

Inter Trading for more than 40 years work as a trader in the market of chemical products supplying key raw materials and differentiated products for large and small company based in Italy and Europe

OF POZZI INDUSTRIES, THE
EXCELLENCE
OF MADE IN ITALY**

KNOW HOW

It's not easy for the costumer to catch in a single glance the complicated, sophisticated PU world. So we have a specialized unit just to help our clients and prospects to take a look of the world they intend to enter, so that they can be aware of all the alternatives that open to their choices. It is called Pozzi Lab, because nothing less than a laboratory is necessary to orient oneself in the intricacies of the polyurethane maze. From the design to the final realization, all the steps can be foreseen in terms of time consumption, costs involved, materials requested, aesthetic result, comfort desired, energy savings, and so on.

The first step is a computer station where you can have a preview of the PU intervention on your house, your vehicle or tool, your industrial unit, your domestic utensil, your sport apparatus. You can preview how would be changed that house, that vehicle, that tool after the designed intervention. The second step is the engineering, that is the rendering of the design in terms of times and costs involved, available alternatives, equipment, production line or lines, necessary manpower, supply network, markets interested, money availability. The final step is that Pozzi Lab will.
