

# Operational Risk Management

Fire risk protection, prevention and response software that manages operational risk and fire safety as well as job and performance management.

**Mission Critical** Software

Delivering software solutions which, through our customers, make a **positive difference** to people's lives.

Operational Risk Management allows you to collect operational risk information (using a PORIS compliant scheme), conduct fire safety audits and carry out job management functions. Using the web application, users can enter and manage information gathered during these audits, which can then be shared with all mobile data terminals, ensuring crews have access to risk critical data at all times.

**This efficient software covers:**

- Operational Risk Auditing
- Community Fire Safety
- Performance Management Reporting
- Fire Safety Auditing
- Job Management
- Mobile Device Support

### At a glance...

Integrated mapping and gazetteer address lookup

Improved risk identification

Enhanced public and fire fighter safety

System Uptime 99.9%

Easily Create risk information reports

### Increase efficiency and excellence:

- Reduces delays in providing risk data to operational crews
- Eliminates the need to re-enter information
- Automated assessment prompts
- Unified data source

### Cost savings:

- Hosted on Amazon Web Services, providing a cost effective, reliable, scalable solution
- Available via the government's G-Cloud framework, reducing procurement time & costs
- Increases the amount of prevention activities
- Reduced data entry time and paperwork

We worked with 3tc Software to develop this to help FRs manage their protection, prevention and operational risk information activities. The main driver has been to ensure services have a joined up picture of risks posed by the built and natural environment and ensure firefighters are provided with risk information in a timely fashion.
