

Case study - Lancashire Hill Estate

The Project

Lancashire Hill Estate

From the initial brief, Rotec created a personalised design, which incorporated an access door within a side panel to cater for security cameras, a key-pad entry system etc.

“Rotec Security Solutions secured the tender to provide bespoke steel security doors to the main entrances and link corridors for the Lancashire Hill Estate in Stockport. In addition to the doors they also designed full height accessible panels to incorporate CCTV cameras. The doors / screens have proved to be a success since their installation. The manufacture, delivery and installation by Rotec was actioned on time and to budget a job well done”.
