

DECOR DESIGN

Sahm masters every decoration technique needed to apply brand logos: transfer, manual or fully automatic silk-screening, coatings, gold and platinum prints, or UV colour technique with a broad spectrum of colours - the range is huge!

Successful samples of exclusive glasses for top brands.

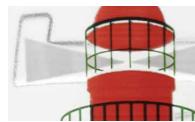

SAHM AUTOMATIC PRINTING

Using top-quality 8-colour silk-screen lines, SAHM can rationally manufacture even complex decors. Suitable for logos and promotional decors.

SAHM SPECIAL GOLD / PLATINUM

Glass decoration with valuable precious metals can ornament a company logo or the rim. Glazes with a proportion of genuine precious metals are used for this process.

SAHM THERMO COLOURS

SAHM thermos are decorative glazes that change shades depending on how they are filled (hot or cold). This can result in some truly »enchanting« effects.

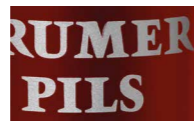

SAHM LASER TECHNIQUE

Nucleation and simplified brand logos can be lasered into the glass.

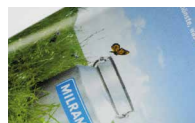

SAHM FROSTING

By treating the glass in acidic immersion baths, the surface of the glass becomes slightly rough. A frosting effect is created that makes decors appear more velvety.

SAHM COLOUR COATING

A SAHM coating is a plastic coat in which organic glazes are sprayed directly onto the glass and then printed over in several colours.

SAHM DECAL

Transfers are only used today for complicated decors and/or glass shapes. The motifs are transferred manually to the glass and then fired onto it.

SAHM METALLIC DECOR

SAHM metallic decors are impressive due to their strongly metallic effect. They are available in a variety of metallic looks.

SAHM UV DECOR

After every printing, a plastic glaze is cured under UV light. The merits of this procedure are used and huge range of shades is possible.

SAHM RELIEF PRINTING

SAHM relief printing is the cost-effective alternative to relief glassware. It is a way to achieve decors that appear in relief and are tangibly intriguing to the observer yet even possible in small production runs.
