

Parex Streetscape have joined Interlay – the independent association of paving contractors dedicated to promoting and maintaining the highest professional standards

Parex is a leader in the development of specialist hard landscaping products offering a choice of solutions to meet every requirement.

The Parex Streetscape range offers mortars for the rigid laying of paving units which combine to form systems which meet every need in modern hard landscaping construction.

Products comply with the relevant part of BS 7533 for: bedding, bonding and jointing of natural stone, clay and concrete block paving.

The range is comprised of advanced materials specially formulated to be cost-effective, easy to use and to speed up some of the more labour-intensive aspects of hard landscaping by minimising labour requirement on site and maximising efficiency. The Parex Streetscape range is supplemented by high performance materials for finishing works including: manhole, kerb and street furniture placement, making Parex a single source supplier for all hard landscaping needs.

A team of sector experts based across the UK can advise on the most suitable materials for specific tasks and also practical on-site training.

The Parex Streetscape range has now been extended to include an ECO range of bedding and jointing mortars which contain recycled aggregate to reduce embodied energy.

The reduced carbon footprint offers a more sustainable option for designers and helps conserve valuable natural resources.

Bespoke mortars to meet the modern demands of hard landscaping projects are available upon request.

PAREX Streetscape & Façade Mortars

Key products in the Streetscape range include:

PAREX FBC (Fine Bedding Concrete): A BS 7533 compliant bedding mortar for hard landscaping available in: 25kg and approx. 1 tonne bulk bags and, for larger schemes, in replenishable site-based bulk silos.

The mix includes added polymers and plasticising agents providing a strong and stable bedding mortar for the bedding of paving units.

Rapid-Set (RS) and Eco versions are available upon request.

PAREX Granatech: Is an easy-to-use BS 7533 compliant slurry applied jointing mortar ideal for use with all types of paving units in hard landscaping projects. It is ready for on-site mixing with the addition of water and is compatible with Parex FBC bedding mortar and Parex Bond Plus priming mortar. Granatech can be speedily applied over large areas for the fast and cost-effective jointing of all paving units wherever there is a large proportion of jointing material to paving unit.

An Eco version is available upon request.

PAREX SettPoint: SettPoint is ideal for traditional setts requiring an aesthetically pleasing wide joint. SettPoint provides a free-flowing solution which can be poured into gaps to provide a high strength, durable finish. The BS 7533 compliant grout-based formulation is self-smoothing, exceptionally strong and contains a special agent to compensate for shrinkage to ensure that finished joints will not shrink or crack.

PAREX Bond Plus: Designed for use as a "scrub coat" to improve the adhesion between the paving units and the underlying bedding mortar. Bond Plus Priming Mortar is fully compliant with the requirements of the relevant parts of BS 7533. The pre-blended product is ready for on-site mixing and only requires the measured addition of water.

It has been formulated for use with other materials in the Streetscape range.

PAREX Standard Mortar: Is a gun-injected high strength mortar which is BS 7533 compliant for the jointing of paving units. It is extremely durable and the gun injection process speeds up outputs and completion times on site when using only semi-skilled labour.

A standard range of colours are available.
Bespoke colours are also available to special order.

The PAREX Streetscape range also comprises a range of high performance bonding and bedding materials for: manhole, kerb and street furniture placement.

A choice of high strength, quick setting products for all types of situation and conditions are available which out-perform traditional bedding products.

In addition, the range includes a wide choice of cementitious, resin-based and fibre reinforced materials specifically designed for early road opening and use in cold weather conditions.
