BLACKDOWN *for* Habitats

Blackdown Environmental are experienced in working in environmentally sensitive areas, and offer a pragmatic and affordable approach to habitat management

Our team are have a thorough knowledge of habitat creation and management techniques, from the installation of specialist wildlife refugia, to the construction of lakes and ponds.

With our own plant and equipment, we offer the most up to date techniques and solutions in conservation and countryside engineering. We assess and undertake all categories of tree, vegeta-tion and site clearance and our range of specialist machinery can aid in the reduction of project costs and timescales. With the support of our Ecologists we are able to carry out destructive surveys and clearance on all types of terrain.

Blackdown Environmental's specialists can advise on projects ranging from butterfly habitat management, to the design and construction of artificial badger setts, and the creation of otter holts. We'll work closely with you to accommodate your require-ments, whilst remaining sensitive to the needs of the environment.
