

The Tailored Collection

Aquavision's 'Tailored Collection' comprises of 'off-the-peg' bespoke-style mirrorTV's, designed with the Integrator in mind. There are 3 different MirrorVision+ sizes to choose from [which can house the TV in portrait or landscape]. All the designer must do is simply choose which size glass, LCD and which way round the fixings must be to house the LCD. In creating an almost 'off the shelf' product which retains its luxurious status and drives down the costs can only prove to be beneficial for everyone.

MirrorVision+ glass from Aquavision® achieves a perfect balance between the conventional, 100% reflective "silver" mirror and the minimally reflective glass normally required for television viewing. Perfect for every room in the home, hotel, office, everywhere that you would put a mirror or a television, you can now put both. With absolutely no visible signs of the television when it is turned OFF. Our MirrorVision+ even works in high ambient light environments!

We have sourced this glass from a company with many years experience in vacuum coating, they are the world's originators in using high-tech magnetron sputtering in the production of vacuum mirrors. Using this system we have innovated a proprietary hard-coating technique, which, when applied to the final stages of glass formation, produces a surface that is 5 times harder to scratch and which substantially increases the products shelf life. The propriety coating is strengthened using Stainless Steel and Titanium.
