

Introduction

This powerful, software is a must for all firms committed to court work whether it be on a Private Client basis or on a Legal Aid Basis. By using the software it enables users to capture time and the subsequent charge against each client matter by simply carrying out the work.

For example the automated document management part of the software creates the document and instantly updates the charge to the client file as a by-product. The system is clever enough to know that a document is single or multiple pages long. This same ethos applies to all input into the system including meetings in-house, outside, court appearances and so on.

The system can apply the correct charge for the type of case, the appropriate rate for qualified and non qualified staff and can even calculate the complex split on travelling time to prison, court across however many matter it effects. At anytime the system can create an interim fee note and can report extensively on WIP by fee earner, department, work-type and so on.

The Intelligent Time & Files Management system has become widely used owing to the increased requirement for information on work in progress. This is supplemented by a better need for management information within all busy Legal Firms, large or small, not to mention a desire to increase fee billing where appropriate.

Recording even one additional unit of time per day per fee earner can add substantially to the overall profitability of a firm. Make your practice more profitable by accurately billing the work carried out by being able to justify the fee due to exact records of the work carried out and of course the correct billing method deployed by the system. (This is of particular interest to those firms who carry out Court, Commercial and of course Legal Aid Work)
