The Frontiers of Payments

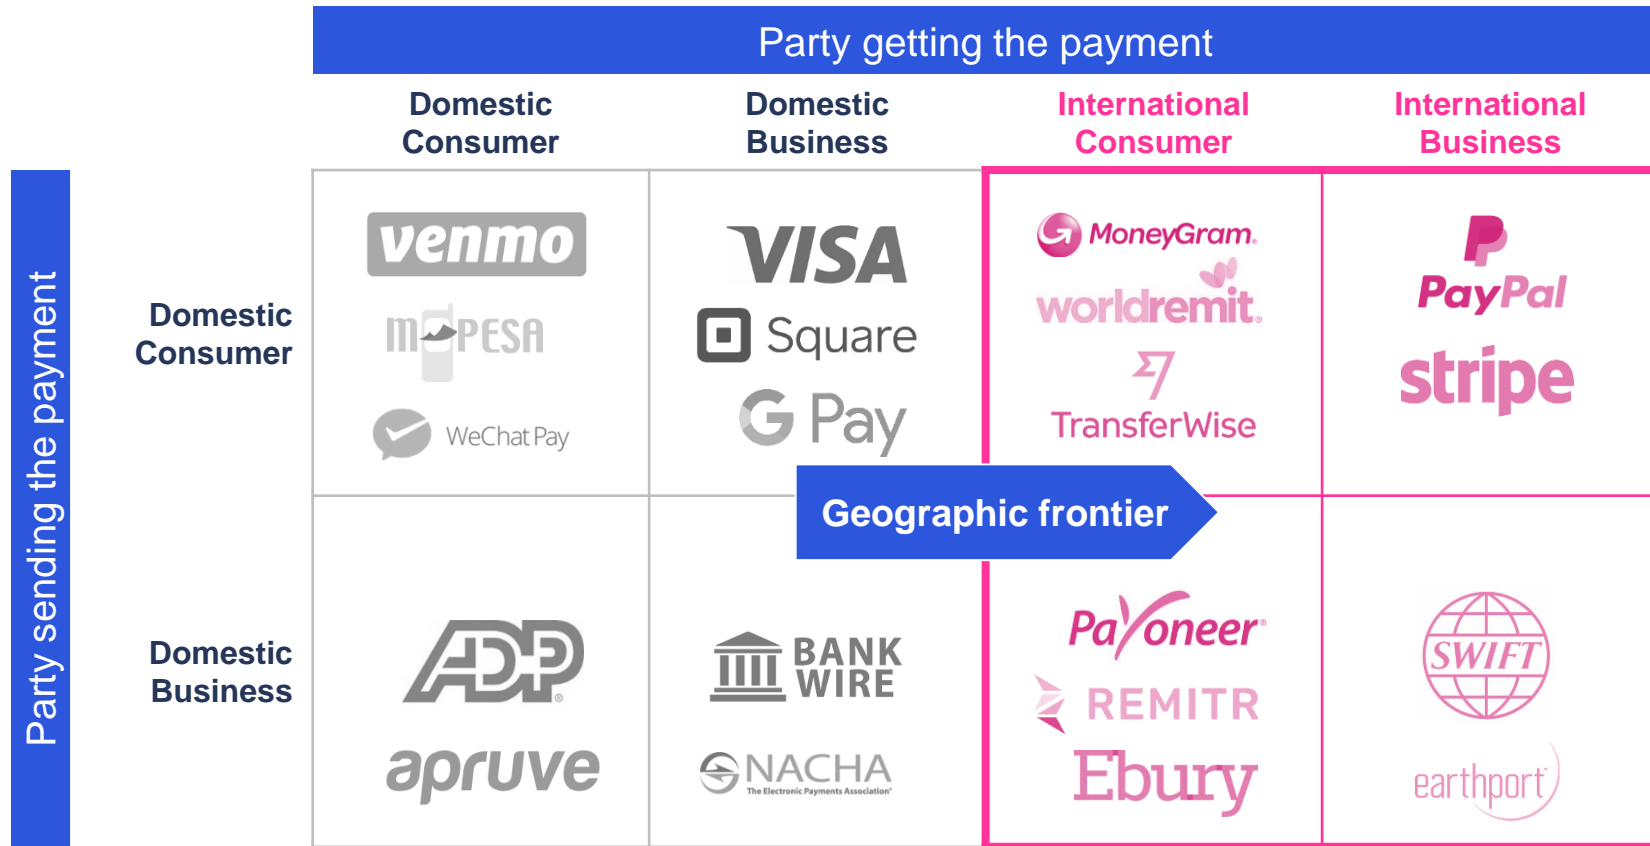

One way to understand value transfer is by the type of actor that initiates and receives the payment

Party getting the payment

Party sending the payment

New Paytech value creation comes from emerging frontiers. One example is improving payments across borders ...

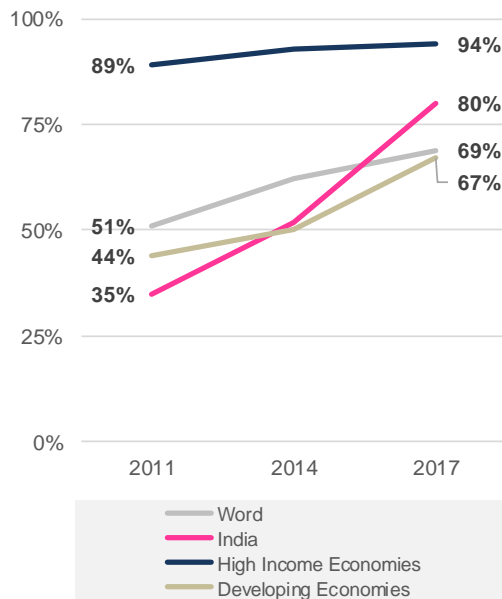

... Another frontier is the transition from cash retail to payment by cards – a digitization of the payment rails ...

Cash

Adoption of Banking (% population with account)

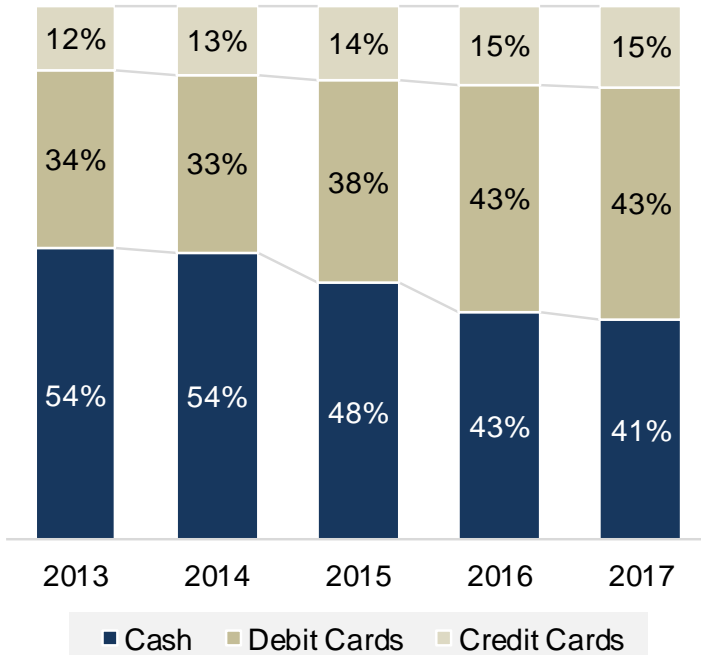

Cards + Banking

... leading to 20-30% relative reductions in the use of cash for physical retail transactions across geographies

UK

Retail Transactions
(\$B in Payment Method)

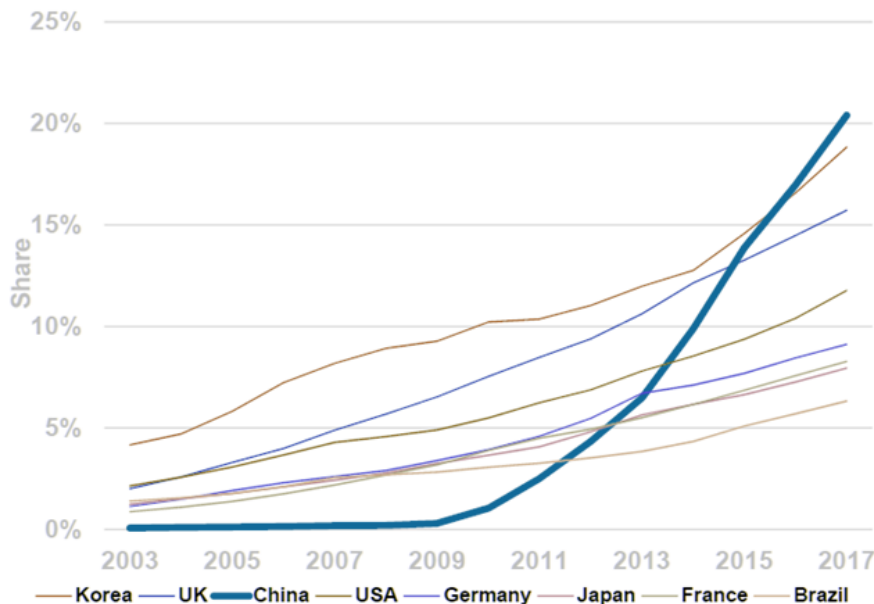

China

Retail Transactions Value, ex. e-Commerce (Payment Method)

Further, physical commerce has been shifting to the web via e-Commerce, requiring new types of infrastructure and value transfer

E-Commerce as % of Retail Sales

10 Year Marketcap Performance

And e-Commerce is now becoming mobile commerce ...

Global Digital Commerce
(volume by Mobile App vs Browser)

China B2C e-Commerce Gross Merchandise Value (\$B)

... and mobile proximity payments ...

**Mobile Proximity Payments:
Estimated Users Globally (million)**

- Samsung Pay
- Starbucks Coffee
- Apple Pay
- Google Pay
- TenPay International
- WeChat Pay

... followed by developer-tooling and open banking APIs

Step 1: Set up Stripe Elements

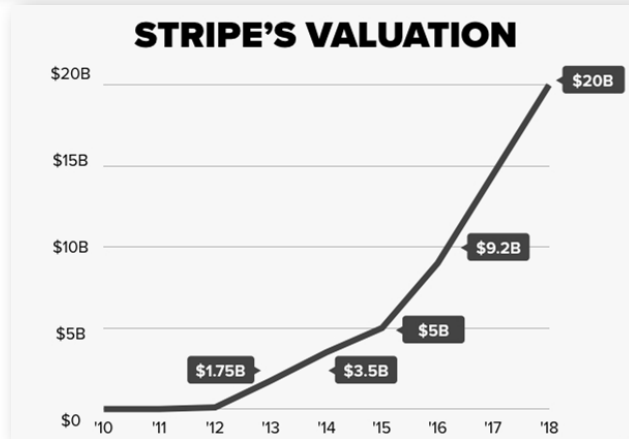

Elements is available as part of [Stripe.js](#). Include this in your page and create a container that will be used for the `paymentRequestButton` Element:

```
1 <script src="https://js.stripe.com/v3/"></script>
2 <div id="payment-request-button">
3   <!-- A Stripe Element will be inserted here. -->
4 </div>
```

Your Stripe publishable [API key](#) is also required as it identifies your website to Stripe:

JavaScript JavaScript (ESNext)

```
1 var stripe = Stripe('pk_test_TYooMQauvdEq54NiTphI7jx');
```

BBVA open banking, built on \$117 million Simple acquisition

Consumer API

Create branded deposit accounts in seconds

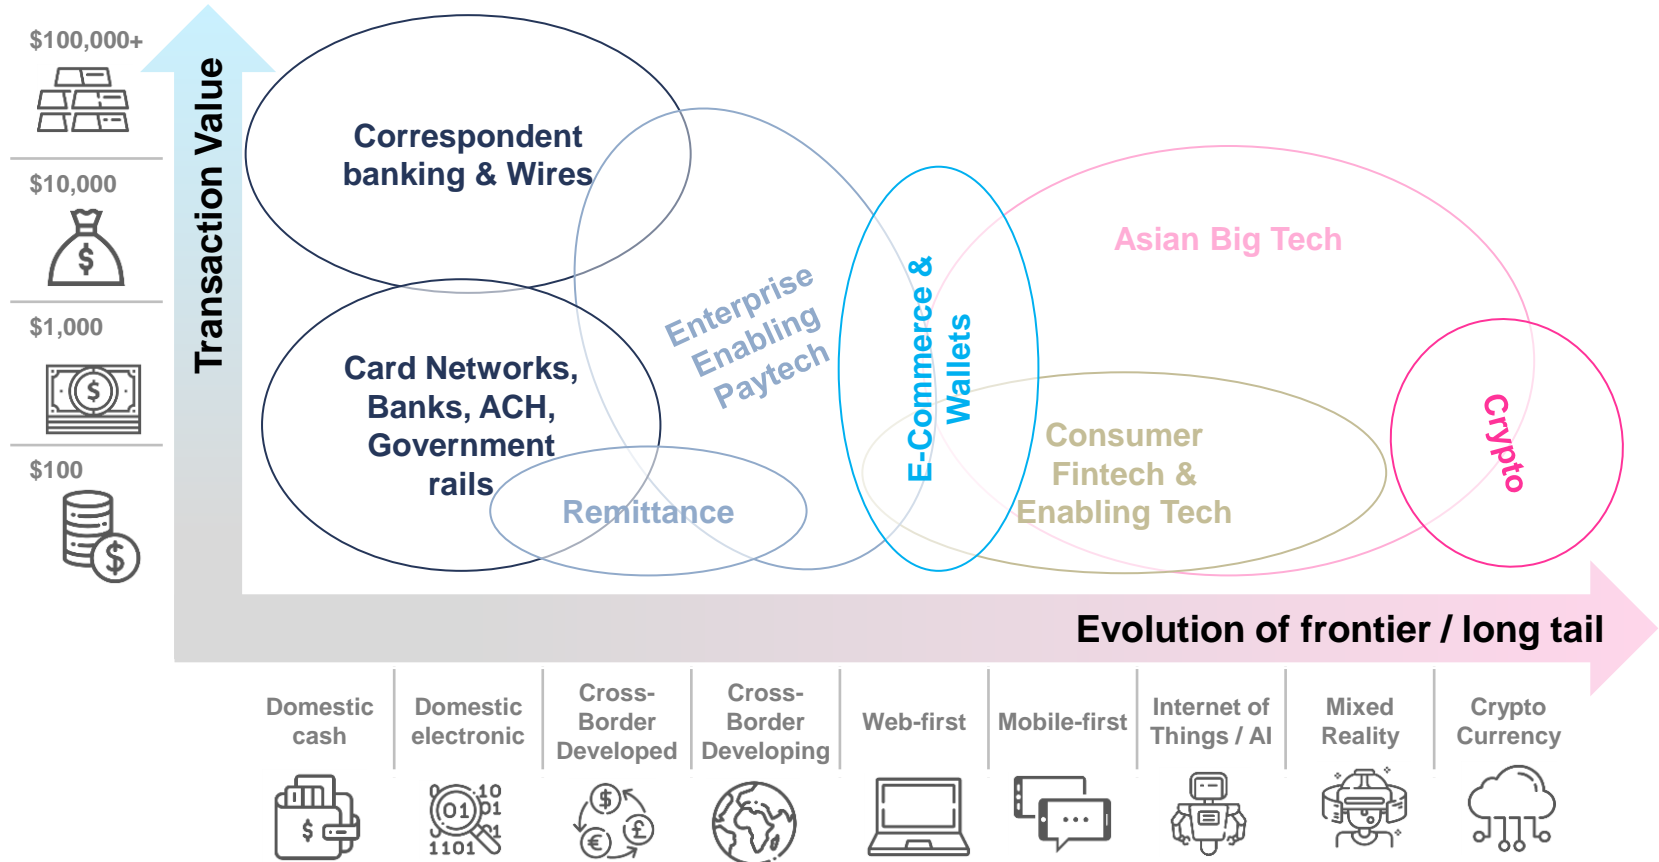

```
{
  "account_type": "checking",
  "multiple_participants": "false",
  "participants": [
    {
      "participant_user_id": "{{customer_id}}",
      "participant_role": "holder"
    }
  ]
}
```

Move Money API

Route multiple payment methods through a single endpoint

```
{
  "origin_account": "RA-abc12def-g345-6h78-ij90-k111m2n456op",
  "destination_account": "RA-6de29cd4-4e02-45b7-a4b5-ad5ca9f90009",
  "amount": 60.00
}
```

The frontier is increasingly digital and esoteric

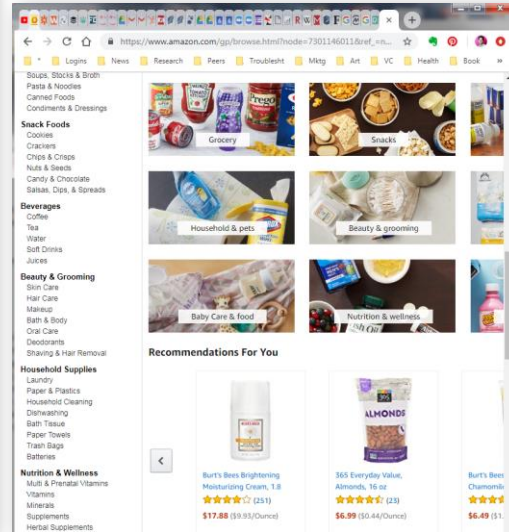

What is Augmented Commerce?

After retail channels shifted from Physical to Digital, digital objects are now bleeding back out into Physical world

Physical

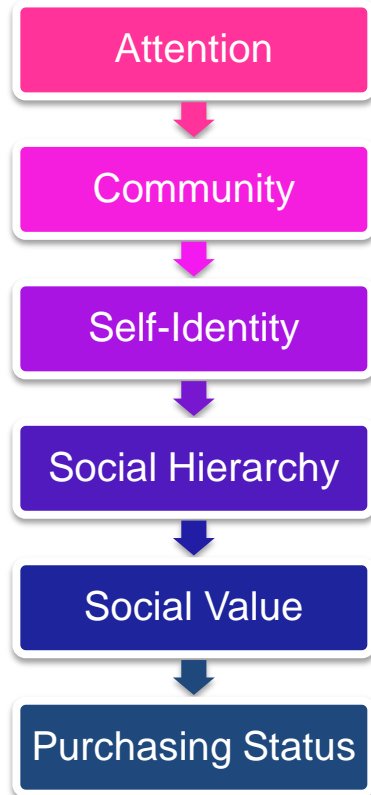

Digital

Digital Becomes Physical

Digital objects and environments create social value and identity, based on humans being social animals

Fortnite Has Made More Than \$1 Billion from Microtransactions

Video game communities are instantiating themselves in virtual reality, which can exhibit scarcity value

Software and hardware to power these worlds are bleeding into physical reality

Augmented Reality (ARKit) ready iPhone
Installed Base Globally (millions) & VR/AR Headsets

Digital objects take the place of physical ones through augmented reality, with embedded payment functions

Ikea AR App

Payment system

Payment experiences can also be rendered in the virtual domain, consumers trained for it via video games

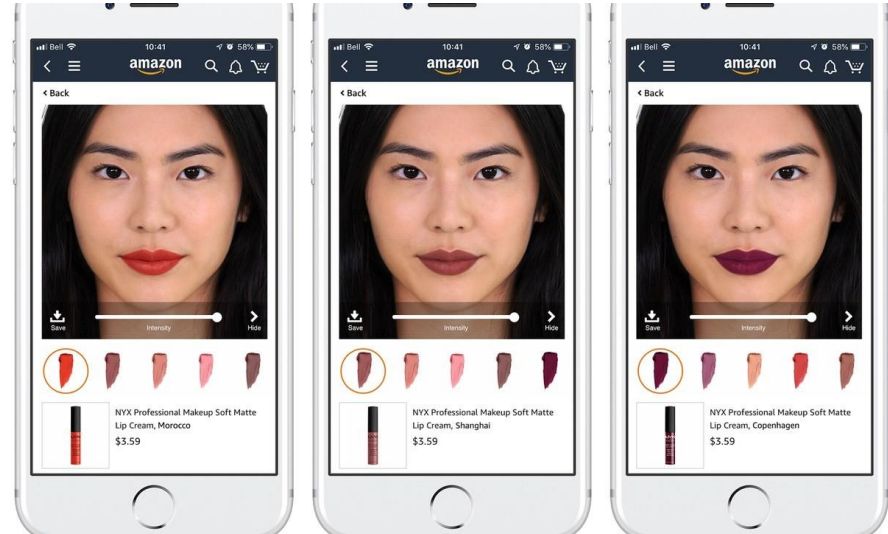

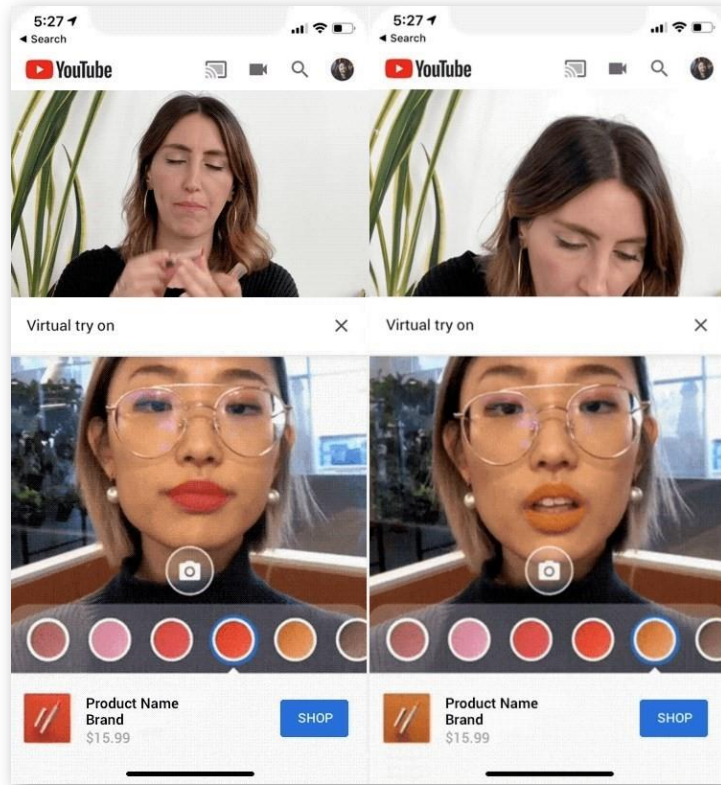

Alibaba's new payment system lets virtual reality shoppers pay by nodding

Worldpay creates VR payments prototype

AR shopping experiences at the point of intent, like Amazon browsing or the interactive Youtube ad unit

Hypothesis on evolution of Commerce

Physical

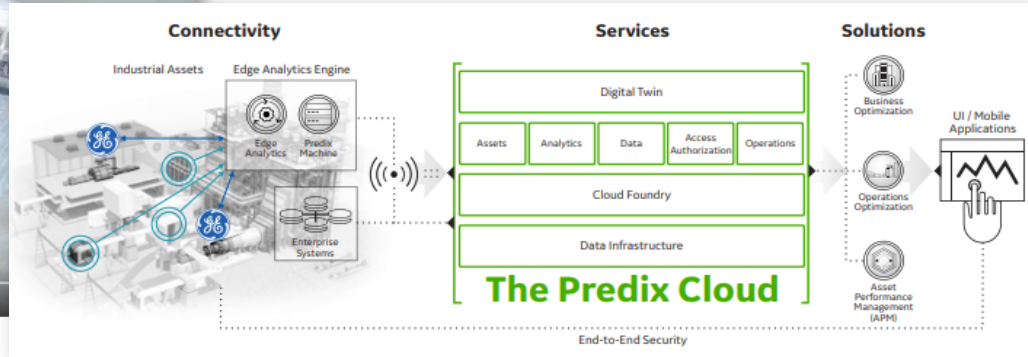

Digital

Digital Becomes Physical

Physical Becomes Digital

#GEPower #PoweringForward
GE's Network Digital Twin | GE Power Digital Solutions | GE Power

Companies like Zwift create a digital twin for physical activity, position within virtual community, and sell status

Physical Bike

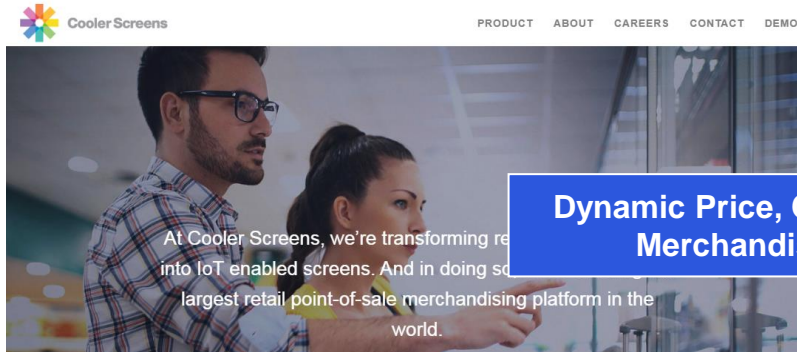

Digital Twin

Social Activity

A digital twin for merchandise through smart interface that tracks inventory, customers, intent, and physical buying

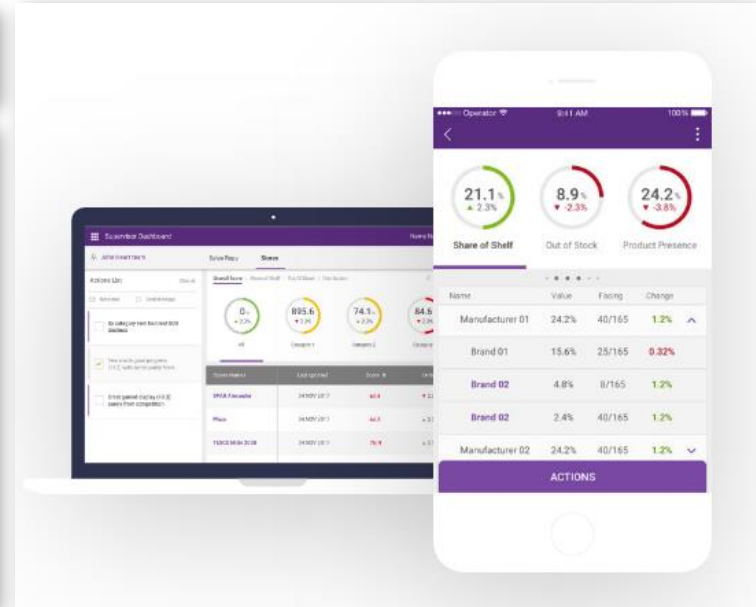

Dynamic Price, Customer & Merchandise Tracking

Machine vision at scale to digitize inventory with smart phones, analytics included

Warburg Pincus-Backed Trax Raises \$125 Million Pre-IPO Funding

Alibaba leading in digitization of stores and value chain with New Retail initiative, using machine vision and AR for product sales and payments

Walmart conceptualizing shopping experience with users interacting in virtual reality with physical space using digital robot bodies

Walmart Patents for VR-Based Shopping

People would put on a pair of virtual reality glasses to shop.

Sensor-laden gloves would detect shoppers' movements and provide sensory feedback.

Autonomous robots in remote fulfillment centers would react to shoppers' virtual movements and pick and pack items.

Amazon using digital identity to place you in digital system, machine vision for navigation, interaction and payment

Identity for
Digital System
& Payments
Mechanism

Machine
Vision to
Digitize your
Activity

In these digital economies, how do you enable digital scarcity, payments processing, and interaction between open systems?

Technical standard [\[edit \]](#)

The ERC-20 token standard has the following method-related functions:^[1]

The specific wording of the function is followed by a clarification of what it does, in square brackets.

1. `totalSupply()` public view returns (uint256 totalSupply) [Get the total token supply]
2. `balanceOf(address _owner)` public view returns (uint256 balance) [Get the account balance of another account with address `_owner`]
3. `transfer(address _to, uint256 _value)` public returns (bool success) [Send `_value` amount of tokens to address `_to`]
4. `transferFrom(address _from, address _to, uint256 _value)` public returns (bool success) [Send `_value` amount of tokens from address `_from` to address `_to`]
5. `approve(address _spender, uint256 _value)` public returns (bool success) [Allow `_spender` to withdraw from your account, multiple times, up to the `_value` amount. If this function is called again it overwrites the current allowance with `_value`]
6. `allowance(address _owner, address _spender)` public view returns (uint256 remaining) [Returns the amount which `_spender` is still allowed to withdraw from `_owner`]
