

AgilePM® - Workshop contents overview

4 days - 35 PDUs

Workshop details

A. About AgilePM®

AgilePM® is a robust methodology on how to handle projects using Agile framework and is applicable for diverse industries. It gives a flexible methodology, enables closer working with the customers to understand their requirements better to provide assurance that the built solution would meet the customer needs quickly. From the project team perspective, it provides greater empowerment to them to enhance the team morale and productivity.

B. Which are the benefits of using AgilePM?

AgilePM is based on DSDM approach and confers multiple benefits for the projects.

- Better business ownership of the developed solution
- Delivery on time while protecting solution quality
- Elaborate guidelines on how to adapt agile for organizations in different stages of its adoption
- Reduction in the risk of building a wrong solution
- Guidance on how to an organization needs to adapt to suit agile behaviors, concepts and techniques to run projects better
- Smoother deployment through collaboration

Organizations adopting Agile approach for their project management have reported a better likelihood of project success.

C. Course overview

The overall course will run for four days with extended timings (including foundation and practitioner exams). The topics to be covered in the course are as under, with a broad day-wise split:

Day-1

What is Agile? And why use DSDM?
Agile Philosophy, Principles and project variables
Agile project management lifecycle
Agile project roles and responsibilities – including business interests, solution interests, management interests and process interests

Day-2

AgilePM - Products created during the Lifecycle
MosCow Prioritization and timeboxing
Planning and control in an Agile Project
Quality Management in an AgilePM project
How testing is carried out in Agile projects?
Test Driven Development approach

Day- 3

People, Team and Supporting practices
Empowering teams in an Agile environment
Communication in Agile projects
Requirements management in an Agile project – User stories
Estimating and planning in the Agile environment
Risk management in an Agile environment
Configuring the Agile process – tailoring to suit the environment
AgilePM – Foundation – Mock and final examinations

Day -4

AgilePM Practitioner mock examination

AgilePM Practitioner final examination

Within the above syllabus, day-wise split of topics could get structured to give the best learning experience for the delegates.

D. AgilePM examinations

The AgilePM foundation examination is a closed book exam to test fundamental concepts. It will run for forty minutes, will include 50 questions and the candidates need to get 50% or more marks to pass.

The Practitioner Level aims to measure whether candidates are able to apply AgilePM® methods to the running and managing of a project, blending with the best practices of Agile. They need to show that they are able to fine-tune AgilePM to different project circumstances and understand the relationship between processes, components and techniques.

The Practitioner Examination is a “Scenario based” examination lasting Two and Half hours. This is an open – book format (with access only to the AgilePM manual). Candidates need to score atleast 40 marks out of a total of 80 marks to pass this examination.

E. Who can attend

Any Project Management practitioner, seeking to familiarize themselves with a widely adopted global methodology and get certified. Unlike many other Agile courses, AgilePM is widely applicable to diverse industries and verticals.
