

Cloud Control

Combining the benefits of Microsoft Cloud Services and IaaS

Cloud **Control** combines the benefits of Microsoft Cloud Services and the flexibility of IaaS Virtual Machines to provide a fully managed cloud platform that works for your whole organisation.

Very happy – the guys are great, and can never do enough! The service is great, from technical through to back office.

David Lloyd
Consultant, IMI

With Cloud **Control**, you get the Microsoft Azure cloud platform but it is fully managed and tailored to your exact needs.

Networking

Cloud **Control** places your Virtual Machines on a large multi-region network where we manage and support:

- ✓ DNS
- ✓ External Firewalls
- ✓ External Port Forwarding
- ✓ Access Control Lists
- ✓ Load Balancing

Active Directory

With Active Directory, you can utilise network credentials on your virtual machines. With traditional cloud services you would need to use 3 VMs for a highly available environment with applications and Active Directory.

Cloud Control already runs an active directory server and allows unlimited users free of charge, providing you with authentication and security at no extra cost.

Backup and Recovery

Just because your application is in the cloud, it doesn't mean it is invulnerable.

With Cloud Control, your storage is duplicated 3 times in the same region, and 3 times more in a second region as a safety net to ensure your data won't be lost.

For further peace of Mind, we also provide SQL Server protection and the ability to snapshot your VM as an added service

Monitoring

Virtual Machines deployed under Cloud **Control** have active monitoring to ensure your infrastructure is performing correctly.

- ✓ VM Availability
- ✓ Network Availability and Link Health
- ✓ VM Performance
- ✓ Hard Disk Health
- ✓ Hard Disk Capacity Utilisation

Management

Cloud Control includes more than just your Virtual Machine. We manage the operating system on your behalf including:

Security

We automatically deploy security updates

Distribution

Cloud Control is always up to date to give you the latest features

Configuration

We provide full standard configuration of your VMs

Anti Virus / Malware

We install and manage anti-virus software to keep you safe

Support

We don't just provide you with a VM, we offer full ongoing support including:

Infrastructure & VMs

- ✓ Full infrastructure support
- ✓ VM Set up & Deployment
- ✓ External Firewall
- ✓ Remote Access

Operating Systems

- ✓ Function monitoring and maintenance
- ✓ Automatic updates
- ✓ Domain level user management
- ✓ Standard configuration and best practice

Upgrade to a fully managed cloud with Cloud **Control**
