Claire Dreamer

Service Six

Service Six contacted IntaForensics to enhance their cyber security defences. Service Six are active participants in a number of local cyber security initiatives and embrace the ethos of leading by example. They engaged IntaForensics to support their certification journey and committed at the beginning of the process to achieve basic Cyber Essentials, Cyber Essentials Plus and IASME standard certifications.

“We enlisted the help of Intaforensics to aid us in accreditation of Cyber Essentials. Damian Walton was extremely professional and very helpful in us achieving our CE badge. The peace of mind in knowing that, as an organisation, we are fulfilling the government guidelines for good basic cyber hygiene is reassuring for our staff, end users & funders.

From the outset, Service Six evidenced a professional and determined response to the task in hand and achieved Cyber Essentials basic certification very quickly. They are currently progressing through the Cyber Essentials Plus and IASME requirements and have demonstrated a focused and determined approach to ensuring the security of their organisation and demonstrating that the Scheme is designed for all types of organisations.

“We look forward to working with Damian and Intaforensics in attaining our Cyber Essentials Plus and IASME accreditation over the next few weeks.”

Founded in 2008, Service Six provides a wide range of support, counselling and activity based services for children, young people, adults and families within Northamptonshire.
